

Steel Control Damper ▲ 5½" Deep ▲ 6¼" Airfoil Blades ▲ Parallel (AC515) or Opposed (AC516) ▲ 150°F Max Temperature

STANDARD MATERIALS AND CONSTRUCTION

FRAME: 5½" x 7⁄8" x 16-GA galvanized steel hat channel.

BLADE: 20-GA galvanized steel double skin, Airfoil shaped construction, 6¼" wide.

LINKAGE: Plated steel tie bar and crank plates with stainless steel pivots contained in jamb.

BEARINGS: Heavy duty molded nylon.

AXLES: ¾" square steel.

DRIVESHAFT: ¾" square steel, extendable 6" beyond damper frame.

SEALS: Silicone on blade edges, and stainless steel at jamps.

STOPS: Galvanized steel angle at head and sill.

FINISH: Mill.

OPTIONS

Exact Size

Material - 304 Stainless Steel

Face/Bypass - Vertical, Horizontal, or Perpendicular

Sleeve - Transition - Sideplate

Vertical Blades

Flange - Front, Rear, or Both

Blade Seal - Vinyl

Jamb Seal - Stainless Steel

Jackshafting

Actuators - Manual Quadrants, 120V, 24V, 230V or Pneumatic

Position Indication Switch - PK1200, Small Aux Switch, or Integral to Actuator

Transformers

Explosion Proof Housing

Pilot Positioner

Copper Tubbing

Tab-Lock Retaining Angles - 1 or 2 Sets

Bearings - OIB or Stainless Steel

Axle - Stainless Steel

Security Bars

Finishes - Baked Enamel, Baked Epoxy, or Prime Coat

NOTES

1. ¼" nominal deduction will be made to the opening size given.
2. Depending upon damper height, a variable width blade may be required, which will extend to a maximum of 3¼" from either the front or back of the damper. Contact the factory if the exact dimensions of this variable blade are critical.
3. Shipping weight approximately 6.5 lbs./sq.ft.

DAMPER SIZES

Panels	Min Panel	Max Single Panel
Parallel Blade	8"W x 6"H	48"W x 72"H
Opposed Blade	8"W x 14"H	48"W x 72"H

Steel Control Damper ▲ 5½" Deep ▲ 6⅞" Airfoil Blades ▲ Parallel (AC515) or Opposed (AC516) ▲ 150°F Max Temperature

PRESSURE LIMITATIONS

The pressure limitations shown below are based on the design limits of the axles or blade deflection. Another model should be selected if pressure exceeds the values shown.

PRESSURE DROP

Pressure Drop Ratings are tested in accordance with AMCA Standard 500 using test set-up Fig. 5.3 for dampers installed with duct upstream and downstream. Static pressures are corrected to .075 lb./cu.ft. air density.

NOTE: Curves are shown for the two sizes indicated. Pressure Drops will be somewhat lower for larger sizes and somewhat higher for smaller sizes.

AIR LEAKAGE

Leakage for Models AC515 and AC516 shall not exceed 4.0 CFM per sq.ft. at 1 in. w.g. differential pressure and at a temperature of 70°F. Data are based on a seating torque of 40 in. lbs. for dampers less than 4 sq.ft. in size. Dampers above 4 sq.ft., .5 in.lbs.per sq.ft. is applied to hold the damper in the closed position. Data is based on a 48\" wide x 48\" high sample tested in accordance with AMCA Standard 500 Figure 5.4 or 5.5.

Values shown in the note above are derived from tests performed in accordance with AMCA Standard 500 and are stated in SCFM at 1 in. w.g. Use the conversion factors in the table below for leakage values at greater pressures.

Pressure	Conversion Factor
2 in. w.g.	1.41
3 in. w.g.	1.73
4 in. w.g.	2.00
