

The Mestek Commercial Damper and Louver Group (MCDLG) warrants our Kynar 500 finish for (20) twenty years and the Kynar XL finish for (30) thirty years on aluminum products.

Our Kynar finishes will meet the following standards:

- A. WILL NOT chalk in excess of ASTM-D-659-80 number eight (8) rating, determined by the procedure outlined in ASTM-D-659-80 specification test.
- B. WILL NOT change color more than five (5.0) Hunter E units as determined by ASTM method D-2244-79.
- C. WILL NOT crack, check, or peel (lose adhesion). But this does not include minute fracturing which may occur in proper fabrication of the building parts.

MCDLG warrants our MCDLG 2605 high performance powder coat finishes for (10) ten years and our MCDLG 2604 standard powder coat finishes for (5) five years for aluminum products. MCDLG also warrants our anodized finishes for (5) five years on aluminum products.

MCDLG cannot warrant any field painting done to our louvers. For touch-up and minor field repairs, MCDLG can supply small quantities of matching air-dry Kynar on request. For large areas or refinishing the entire louver, we recommend a good quality oil-based semi-gloss enamel, such as Sherwin Williams for a long lasting finish. The surface must be clean and free of dirt or contaminants before any paint is applied to the finish surface. You should get good adhesion and the finish will not be affected by the addition of this topcoat.

WARNING! Do not use Acetone to clean the surface of Kynar and MCDLG finishes or use paints which may contain Acetone. Do not use any Lacquer type paints on the surface of Kynar and MCDLG finishes. These chemicals may permanently damage the finish and will VOID the warranty.
