Applications

UNIT HEATER PLACEMENT

Gas-fired unit heaters are used primarily in commercial and industrial buildings such as warehouses, manufacturing areas, garages, showrooms, lobbies, etc. Placement is typically determined by air distribution requirements. Proper distributions should have air directed toward areas of greatest heat loss. Multiple units may be used to greatest effect by positioning units around the perimeter. Several units near the center and with air discharging toward outside walls may also satisfy the heating requirements. Direct air discharge on occupants should be avoided.

TYPICAL APPLICATIONS

EXPOSED

A large square area with exposed walls and roof; units are blanketing all exposed surfaces.

A narrow area with four exposed walls either with or without roof exposure.

A small area with exposed walls requiring one unit.

HOW TO CALCULATE HEAT LOSS

It is suggested that when calculating heat loss for a building, reference be made to procedures outlined in the **ASHRAE Handbook.** As an easy reference, however, the following abbreviated method may be used with a good degree of reliability.

- 1. Determine inside temperature to be maintained and the design outside temperature for your locality. The difference between these two figures is the design temperature difference.
- 2. Calculate net areas in square feet of glass, wall, floor, and roof exposed to outside temperature or unheated spaces. Calculate door as all glass.
- 3. Select heat-transfer coefficients from the table below (or the **ASHRAE Handbook**) and compute the heat-transmission loss for each area in BTU/HR by multiplying each area by the heat-transfer coefficient and the temperature difference.
- 4. Add 10% to the heat-loss figures for areas exposed to prevailing winds.
- 5. Calculate the volume of the room or area in cubic feet and multiply by the estimated number of air changes per hour due to infiltration (usually from one to two). Determine the number of cubic feet per hour of air exhausted by ventilating fans or industrial processes. Substitute the larger of these two figures in the formula to determine the heat required to raise the air from outside to room temperature —

BTU/HR = cubic feet per hour x temperature difference
55

6. The totals of BTU/HR losses from 3, 4 and 5 (above) will give the total BTU/HR to be supplied by unit heaters. (Note: If processes performed in the room liberate considerable amounts of heat, this may be determined as accurately as possible and subtracted from the total).

BH Series — High Efficiency Unit Heater

General Information

DESCRIPTION

Optum brings leading edge condensing heat exchanger technology to Beacon Morris' successful unit heater product offering. Engineered for performance, Optum incorporates state-of-the-art control and combustion technologies.

Optum's tri-metal condensing heat exchanger, control platform, and proprietary fully modulating pre-mix burner design, safely provide industry leading operating efficiencies. Optum units are certified by ETL as 95+% thermal (combustion) efficient and up to 99% maximum efficiency at full turndown!

HIGH EFFICIENCY HEAT EXCHANGER

Optum's tri-metal heat exchanger is the most advanced on the market today. The stainless-steel tubes allow for full modulation without the fear of premature failure due to the corrosive flue condensate, while the highly conductive brass and aluminum fins optimize heat transfer for maximum efficiency.

DIRECT SPARK IGNITION SYSTEM

Optum units utilize a direct spark pilotless ignition of the burner, providing fast heat delivery. This highly reliable and efficient ignition system incorporates an integrated electronic control board to regulate the system sequence of operation, including externally mounted LED indicators for simple troubleshooting.

DDC CONTROL

The unit includes a proprietary control board specifically designed for use with the Optum unit heater. The control board was designed with safety in mind including "SafeSense" technology to detect blocked inlet and flue conditions. The control board will automatically adjust the unit for altitude without requiring field modification. The unit will also self-adjust its operation to maintain clean combustion without decreasing performance.

Designed with ease of service in mind, the unit can quickly be changed from one gas control to another with a simple DIP switch adjustment on the control board without the need to replace components. In addition, all units come with Modbus as standard on the control board to allow the unit to communicate with the Building Automation System via Modbus. This will allow the building automation system to monitor and change set points remotely without the need to go to the unit or install additional controls in the field.

VENTING

The Beacon Morris BH Series is ETL certified in accordance with category IV venting requirements. This certification allows units to be vented either vertically or horizontally in both standard and separated combustion applications. Where allowed by code, PVC or CPVC may be used in lieu of single or double wall vent pipe allowing for an easier and more cost-effective venting installation.

SEPARATED COMBUSTION

Separated combustion "separates" the combustion process from the environment where the unit is installed. The combustion blower draws a controlled quantity of combustion air from outside the building. All critical components including the burners, direct spark ignition, and flue system are fully enclosed within the unit and protected from the atmosphere in the space where the heater is located ensuring clean and efficient combustion. Separated combustion is designed for units installed in dusty, dirty or mildly corrosive environments or where high humidity or slightly negative pressures exist.

CONTROL ACCESSIBILITY

Designed with the service person in mind, Optum has a separate control box located on the rear of the unit for ease access to the unit control board.

10-YEAR WARRANTY

Beacon Morris warranties the heat exchanger, flue collector and burners of each unit heater to be free from defects in materials and workmanship for a period of 10 years from the date of manufacture.

BH Series — High Efficiency Unit Heater

STANDARD FEATURES

- 409 Stainless Steel Tubes with Brass and Aluminum Fins
- 321 Stainless Steel Flue Collector
- 95+% Thermal Efficiency
- 115/1/60 Supply Voltage
- Combustion Blower & Power Ventor
- Blocked Inlet Air Pressure Switch
- Blocked Vent Air Pressure Switch
- Natural or Propane (LP) Gas
- 20-Gauge 430 Brushed Stainless Steel Cabinetry

- Direct Spark Ignition System
- High Limit Switch
- External LED Diagnostic Lights
- 115/24 Volt Control Transformer
- Easy Access Isolated Control Panel
- Modbus
- Open Drip Proof Motor
- Rear Control Access
- 10 Year Heat Exchanger, Burner and Flue Collector Warranty

- Negative Pressure Gas Valve
- Right Side Burner Access
- OSHA Fan Guard
- 4 Point Suspension
- Field Convertible to Separated Combustion
- Condensate Trap
- Condensate Float Switch
- · Gas Conversion Kit Included
- Residentially Certified for Use as a **Utility Heater**

OPTIONAL FEATURES

- Supply Voltages: 208 and 230/1/60 and 208, 230, 460, 575/3/60
- 2-Stage and Various Electronic Modulating Gas Controls
- Single and 2-Stage Mercury Free Thermostats
- Locking Thermostat Cover
- Pressure Regulator (1/2-35 PSI)
- Condensate Neutralizer

- Condensate Pump
- Condensate Pump Shelf Kit
- · Concentric Vent Kit
- Stratification Sensor

[†] Ratings shown are for unit installations at elevations between o and 2,000 feet (0 to 610m). For unit installations in U.S.A. above 2,000 feet (610m), the unit input must be field derated 4% for each 1,000 feet (305m) above sea level; refer to local codes, or in absence of local codes, refer to the latest edition of the National Fuel Gas Code, ANSI Standard Z223.1 (NFPA No. 54).

For installations in Canada, any reference to deration at altitudes in excess of 2,000 feet (610m) are to be ignored. At altitudes of 2,000 feet to 4,500 feet (610 to 1372m), the unit must be field derated and be so marked in accordance with the ETL certification. See HIGH ALTITUDE DERATION section of Installation Manual for deration information.

^{*} Field installed PVC fittings provided with unit sizes 200-400 as follows:

- Size 200 units come with a 2" to 3" PVC reducer

- Size 300 units come with a 2" to 4" PVC reducer

- Size 400 units come with a 2" to 4" PVC drain tee fitting

Reducers/drain tee fittings are to be field installed per Venting instructions.

Tubular Unit Heaters

- BRT SERIES
- BXF SERIES
- BXC SERIES

General Information

BEACON MORRIS TUBULAR DESIGN GAS FIRED UNIT HEATER

The Beacon Morris Tubular gas-fired unit heaters offer a highly efficient, extremely durable alternative to the traditional clam shell design. These units combine the latest tubular heat exchanger and inshot burner technology with the quality and reliability you have come to know from Beacon Morris.

HIGH EFFICIENCY

Standard energy saving features like the direct spark ignition and power venting reduce standby losses and offer improved seasonal efficiencies. Tubular units certified by ETL as providing 83% thermal (combustion) efficiency.

TUBULAR HEAT EXCHANGER

The Beacon Morris tubular heat exchanger has been designed to provide maximum and uniform heat transfer. The low pressure drop associated with this design enables heated air to be evenly distributed to the conditioned space. This curved, non-welded serpentine design experiences less thermally induced stress making it highly durable for significantly longer service life. All Beacon Morris tubular heat exchangers are constructed of heavy duty 20-gauge aluminized steel. Optional 409 stainless steel heat exchangers are also available.

DIRECT SPARK IGNITION SYSTEM

Beacon Morris Tubular units utilize a direct spark pilotless ignition of the burner, providing fast heat delivery. This highly reliable and efficient ignition system incorporates an integrated electronic control board to regulate the system sequence of operation, including an externally mounted LED indicator for simple troubleshooting.

VENTING

The Beacon Morris Tubular unit heaters are ETL certified in accordance with categories I and III venting requirements. This certification allows units to be vented both vertically and horizontally using either single wall or double wall venting materials. This venting flexibility of the unit heater makes installation easier and more cost effective by allowing the installer to utilize existing venting components.

CONTROL ACCESSIBILITY

Designed with the service person in mind, every component of the Beacon Morris unit heaters is easily accessible. Ignition and fan controls are located in one centrally located control panel. The access door provides control isolation as well as a pleasing exterior appearance.

10-YEAR WARRANTY

Beacon Morris warranties the heat exchanger, flue collector and burners of each unit heater to be free from defects in materials and workmanship for a period of 10 years from the date of manufacture.

SEPARATED COMBUSTION

The BRT, BXF & BXC Series heaters are ready for standard or separated combustion configurations all in one unit. A separated combustion configuration "separates" the combustion process from the environment where the unit is installed. A power venting system draws a controlled quantity of combustion air from outside the building. The same system exhausts flue products to the outside. The burners and flue system are enclosed within the unit; thus, the entire combustion process is unaffected by the atmosphere in the space where the heater is located. Separated combustion configurations are designed to be installed where dusty, dirty or mildly corrosive conditions exist or where high humidity or slightly negative pressure prevail.

BRT Series — Low Profile Unit Heater

RESIDENTIAL AND COMMERCIAL CERTIFICATIONS

The Beacon Morris "BRT" Series unit heater conforms with the latest ETL certification standards. Design certified under ANSI Z83.8 for Industrial/Commercial use and Residential use as a utility heater, make this low profile unit heater the ideal selection.

Additionally, BRT Series units are ready for installation in either standard or separated combustion applications right out of the box. If concentric venting is needed, simply add an optional Combustion Air Inlet Kit.

STANDARD FEATURES

- · Standard or Separated Combustion All-In-One Units
- 82+% Thermal Efficiency
- Redundant Single-Stage Gas Valve
- Residential Certification

- 120/24V Control Transformer
- OSHA Fan Guard
- 115/1/60 Fan Motor with Internal Overload Protection
- Direct Spark Ignition
- 20-Gauge Cabinet with **Baked Enamel** Finish

- 10 Year Heat Exchanger Warranty
- · Right Hand Control Access -Field Convertible to Left Hand
- High Limit Switch
- Air Pressure Switch
- Natural or Propane Gas

Vent Caps

^{*}For all installations, the flue collar is included with the unit and should be field installed per the instructions included with the unit.

For installations in Canada, any reference to deration at altitudes in excess of 2,000 feet (610m) are to be ignored. At altitudes of 2,000 feet to 4,500 feet (610 to 1372m), the unit must be field derated and be so marked in accordance with the ETL certification. See unit installation, operation and maintenance manual for deration information.

tt LEGEND: ODP = OPEN DRIP PROOF SP = SHADED POLE

[†] Ratings shown are for unit installations at elevations between 0 and 2,000 feet (0 to 610m). For unit installations in USA above 2,000 feet (610m), the unit input must be field derated 4% for each 1,000 feet (305m) above sea level; refer to local codes, or in absence of local codes, refer to the latest edition of the National Fuel Gas Code, ANSI Standard Z223.1

BRT Series — Low Profile Unit Heater Dimensional Data

D8597

DIMENSIONS .XXX STANDARD UNITS
DIMENSIONS IN PARENTHESIS (XXX) MILLIMETERS

BXF/BXC Series — Tubular Unit Heater

STANDARD FEATURES

- Designed for either Standard or Separated Combustion
- In-Shot Burner Design
- 20-Gauge Steel Jacket with Baked **Fnamel Finish**
- Main Control Panel
- 115/1/60 Supply Voltage
- Direct Spark Ignition
- Redundant Single-Stage Gas Valve
- 115/24 Volt Control Transformer
- Individually Adjustable and Removable Louvers
- Power Vented
- 115/1/60 Volt Motor with Internal Overload Protection
- 10 Year Heat Exchanger, Flue Collector and **Burner Warranty**
- 82+% Thermal Efficiency

OPTIONAL FEATURES

- Stainless Steel Heat Exchanger, Burners and/or Flue Collector
- Supply Voltages: 208 & 230/1/60 and 230, 460, 575/3/60
- Premium Efficiency **Blower Motors** in ODP and TE Types
- Two-Stage and Various Electronic Modulation Gas Controls
- Discharge Nozzles (30°, 60° & 90°) or **Duct Flange** Assembly
- Combustion Air Inlet Kit (allows concentric venting with horizontal or vertical termination)

Unit Number Description

1, 2 - Unit Type [UT]

BXF - Convertible Venting, Tubular Propeller **BXC** - Convertible Venting, Tubular Blower

3, 4, 5 - Capacity [CA]

100 - 100,000 BTU/H 125 - 125 000 BTII/HR

150 - 150,000 BTU/HR 175 - 175,000 BTU/HR

200 - 200 000 BTII/HR **250 -** 250,000 BTU/HR

300 - 300,000 BTU/HR 350 - 350 000 BTII/HR

400 - 400,000 BTU/HR

6 - Furnace Type [FT]

7 - Heat Exchanger Construction Material [FM]

- 1 Standard (Aluminized) Steel
- 2 409 Stainless Steel

8 - Gas Type [GT]

N - Natural Gas

P - Propane Gas (LP)

9 - Altitude [AL]

S - 0-4,999 feet **T** - 5,000-11,999 feet

Note: Installations over 2,000 feet require gas input deration in the field.

Refer to unit installation instructions.

10 - Direct Spark Gas Control [GC]

- 1 Single Stage
- 2 Two Stage
- 3 Electronic Modulation w/Room Sensing 4 - Electronic Modulation w/Duct Sensing (Blower only)
- 5 Electronic Modulation w/Duct Sensing & Room Ovrd. Stat (Blower only)
- 6 Electronic Modulation w/External 4-20 mA
- 7 Electronic Modulation w/External 0-10 VDC

11 - Supply Voltage [SV]

1 - 115/1/60 2 - 208/1/60 **5** - 230/3/60 **6** - 460/3/60 3 - 230/1/60 4 - 208/3/60 **Z** - Special

Note: Supply Voltages [SV] 2-7 include step

Field mounted for propeller units, factory mounted for blower units.

12 - Motor Type [MT]

- 1 Open Drip Proof (Standard) 2 Totally Enclosed
- 3 Premium Efficiency, Open Drip Proof (Blowers only)
 4 - Premium Efficiency, Totally Enclosed
- (Blowers only)

13 - Blower Motor Sizes [MS]**

A - 1/4 HP w/Contactor L - 1/2 HP

C - 1/2 HP w/Contactor P - 1/2 HP w/Magnetic Starter R - 3/4 HP w/Magnetic Starter
S - 1 HP w/Magnetic Starter D - 3/4 HP w/Contactor F - 1 HP w/Contactor G - 1-1/2 HP w/Contactor T - 1-1/2 HP w/Magnetic Starter H - 2 HP w/Contactor U - 2 HP w/Magnetic Starter I - 1/4 HP

W - 1/4 HP w/Magnetic Starter 0 - None/Not Applicable

**Notes: 1. All 3-phase units [SV = 4, 5, 6, 7] include a contactor as standard.

2. All single phase units [SV = 1, 2, 3] include a contactor for units equipped with

3/4 HP motor or higher [MS =D, F, G, H]

3. [MS] options J, L only available with [SV] option 1 (115/1/60).

14 - Accessories [AS]

FACTORY INSTALLED

M6 - OSHA Type Fan Guard (Propellers only)

M8 - Discharge Duct Flange Assembly (Blowers only)

P4 - Terminal Block Wiring

P6 - Summer/Winter Switch

S3 - 409 Stainless Steel Flue Collector

S5 - 304L Stainless Steel Burners

† FIELD INSTALLED (AS-

† All Field Installed Accessories are to be entered as a separate line item using catalog number which utilizes "11AS" as a prefix. i.e: G3 becomes 11AS-G3.

A7 - High Pressure Regulator

A7 - 1/2-1 Regulator for 0.5-10 PSI A7 - 3/8-1 Regulator for 10-20 PSI A7 - 5/16-1 Regulator for 20-35 PSI

F1 - 1-Stage T675A Ductstat (Blower only)

F2 - 2-Stage T678A Ductstat (Blower only)

G1 - 1-Stage Mercury Free Thermostat (Round) **G2** - 1-Stage Mercury Free Thermostat w/Guard Kit **G3** - 1-Stage Mercury Free Thermostat/Fan Switch

G5 - 2-Stage Mercury Free Thermostat w/Fan Switch

G6 - Locking Thermostat Cover G9 - 1-Stage Mercury Free Heating Only Thermostat GW - WiFi Thermostat TH8321WF1001/U

H5 - Low Ambient Control

M2-2 - Vent Caps (5") (Unit Capacity 100-250) **M2-3 -** Vent Caps (6") (Unit Capacity 300-400)

M7 - 2 to 4 Point Suspension Kit (Propeller Only)

P5 - 24V SPST Relay-Specify Purpose

01 - Y-Splitter Nozzle

X2 - 30 Degree Downturn Nozzle

X3 - 60 Degree Downturn Nozzle

X4 - 90 Degree Downturn Nozzle X5 - Vertical Louver Kit

X7-H5 - Horiz. Combustion Air Inlet Kit, 5 inch

(Unit Capacity 100-250) X7-H6 - Horiz. Combustion Air Inlet Kit, 6 inch (Unit Capacity 300-400)

X7-V5 - Vert, Combustion Air Inlet Kit, 5 inch (Unit Capacity 100-250)

X7-V6 - Vert. Combustion Air Inlet Kit, 6 inch (Unit Capacity 300-400)

[†] Ratings shown are for unit installations at elevations between 0 and 2,000 ft (0 to 610m). For unit installations in U.S.A. above 2,000 ft. (610m), the unit input must be field derated 4% for each 1,000 ft. (305m) above sea level; refer to local codes, or in absence of local codes, refer to the latest edition of the National Fuel Gas Code, ANSI Standard Z223.1 (N.F.P.A. No. 54).

For installations in Canada, any reference to deration at altitudes in excess of 2,000 ft. (610m) are to be ignored. At altitudes of 2,000 ft. to 4,500 ft. (610 to 1372m), the unit must be field derated to 90% of the normal altitude rating, and be so marked in accordance with the ETL certification. See unit installation manual for field deration information.

^{*} Flue collar is factory supplied with unit; to be field installed per included instructions.

^{††} See Table 5 in the unit installation manual for ODP motor full load amp values at non-standard voltages.

BTD Series — Tubular Duct Furnaces

Indoor Duct Furnace

DESCRIPTION

The BTD Series duct furnace is designed for use with existing systems for any ducted air application. Beacon Morris indoor tubular duct furnaces are available in 7 sizes (100 – 400 MBH). Beacon Morris products are proudly manufactured in the USA.

Standard energy saving features like the direct spark ignition and power venting reduce standby losses and offer improved seasonal efficiencies. The BTD Series is certified by ETL as providing 82% thermal (combustion) efficiency.

The Beacon Morris tubular heat exchanger has been designed to provide maximum and uniform heat transfer. The low pressure drop associated with this design enables heated air to be evenly distributed to the conditioned space. This curved, non-welded serpentine design experiences less thermally induced stress making it highly durable for significantly longer service life. All standard Beacon Morris tubular heat exchangers are constructed of heavy duty 20-gauge aluminized steel with an optional 409 stainless steel heat exchanger available for applications in mildly corrosive environments.

DIRECT SPARK IGNITION SYSTEM

Beacon Morris BTD units utilize a direct spark pilotless ignition of the burner, providing fast heat delivery. This highly reliable and efficient ignition system incorporates an integrated electronic control board to regulate the system sequence of operation, including an externally mounted LED indicator for simple troubleshooting.

VENTING

The Beacon Morris BTD Series is ETL certified in accordance with category III venting requirements. This certification allows units to be vented both vertically and horizontally using either single wall or double wall venting materials. This venting flexibility of the BTD duct furnace makes installation easier and more cost effective by allowing the installer to utilize existing venting components. The BTD duct furnace can be field converted to separated combustion using the "Air Inlet Kit" or the "Combustion Air Inlet Kit". This is recommended for units to be installed in dusty, dirty or mildly corrosive environments or where high humidity or slightly negative pressures exist. All critical components including the burners, direct spark ignition, and controls are fully enclosed within the unit and protected from the elements ensuring clean and efficient combustion.

CONTROL ACCESSIBILITY

Designed with the service person in mind, every component of the Beacon Morris BTD Series is easily accessible. Ignition and fan controls are located in one centrally located control panel. The access panel provides control isolation as well as a pleasing exterior appearance.

BTD-400

BTD-100

BTD Series — Tubular Duct Furnace

STANDARD FEATURES

- In-Shot Burner Design
- 20-Gauge Steel Jacket with Baked **Enamel Finish**
- Double Wall Construction
- 115/1/60 Supply Voltage
- Direct Spark Ignition
- Redundant Single-Stage Gas Valve
- 115/24 Volt Controls transformer
- Power Vented
- 20-Gauge Aluminized Steel Heat Exchanger
- For Natural or **Propane Gas**
- 10 Year Heat Exchanger, Flue Collector and Burner Warranty
- 82% Thermal Efficiency
- Four Point Suspension
- Easy Access Control Panel
- Left Hand Control Access - Field Convertible to Right Hand

OPTIONAL FEATURES

- 409 Stainless Steel Heat Exchanger and Flue Collector
- Supply Voltages (Field Mounted Transformer): 208 & 230/1/60 and 208, 230, 460, 575/3/60
- Two-Stage and Various Electronic **Modulation Gas** Controls
- High Pressure Regulator 1/2 - 35 PSI
- Single and Two-Stage Mercury Free **Ductstats** and **Thermostats**
- Locking Thermostat Cover
- Low Ambient Control
- Vent Caps
- 24V SPST Relay
- Stainless Steel Drip
- Horizontal and Vertical Louvers
- Air Inlet Kit (For conversion to separated combustion and two roof or wall penetrations. Includes a vent cap for the combustion air inlet pipe)
- Combustion Air Inlet Kit (For conversion to separated combustion and a single roof or wall penetration)

Unit Number Description

1, 2 - Unit Type [UT]

BTD - Tubular Duct Furnac

3, 4, 5 - Capacity [CA]

100 - 100,000 BTU/HR 150 - 150,000 BTU/HR

200 - 200,000 BTU/HR 250 - 250,000 BTU/HR

300 - 300,000 BTU/HR

350 - 350,000 BTU/HR

400 - 400,000 BTU/HR

6 - Furnace Type [FT]

A - Left Side Access

Note: Field convertible to right side access; refer to unit installation instructions

- Heat Exchanger (Furnace) Material [FM] 1 - Aluminized Steel (Standard)

2 - 409 Stainless Steel

Note: Heat Exchanger Material [FM] selection includes flue collector material.

8 - Gas Type [GT]

N - Natural Gas P - Propane Gas (LP)

9 - Altitude [AL]

S - 0-4,999 feet

T - 5,000–11,999 feet Note: Installations over 2,000 ft. require gas input deration in the field. Refer to unit installation instructions.

10 - Direct Spark Gas Control [GC]

1 - Single Stage

2 - Two Stage

3 - Electronic Modulation w/Room Sensing

4 - Electronic Modulation w/Duct Sensing

5 - Electronic Modulation w/Duct Sensing

& Room Override Stat

6 - Electronic Modulation w/External

-20 mA Input 7 - Electronic Modulation w/External

o-10 VDC Input

11 - Supply Voltage [SV]

1 - 115/1/60 **2** - 208/1/60 **5** - 230/3/60 **6** - 460/3/60

3 - 230/1/60 575/3/60

4-208/3/60 **Z** - Special

Note: Supply Voltages [SV] 2-7 include field mounted step down transfo

12 - Motor Type [MT]

0 - None/Not Applicable

13 - Motor Sizes [MS]

0 - None/Not Applicable

14 - Design Level [DL]

A - First Design Level

15+ - Accessories [AS]

FACTORY INSTALLED

K5 - Air Flow Prove Switch

P4 - Terminal Block Wiring

P6 - Summer/Winter Switch

S5 - Stainless Steel Burners

† FIELD INSTALLED (AS-

† All Field Installed Accessories are to be entered as a separate line item using the catalog number which utilizes "11AS" as a prefix. i.e: G3 becomes 11AS-G3.

A7 - High Pressure Regulator

A7 - 1/2-1 Regulator for 0.5-10 PSI A7 - 3/8-1 Regulator for 10-20 PSI

A7 - 5/16-1 Regulator for 20-35 PSI

F1 - 1-Stage T675A Ductstat F2 - 2-Stage T678A Ductstat

G1 - 1-Stage Mercury Free Thermostat (Round)

G2 - 1-Stage Mercury Free Thermostat w/Guard Kit

G3 - 1-Stage Mercury Free Thermostat/Fan Switch

G5 - 2-Stage Mercury Free Thermostat w/Fan Switch

G6 - Locking Thermostat Cover **G9** - 1-Stage Mercury Free Heating Only Thermostat **GW** - WiFi Thermostat TH8321WF1001/U

H5 - Low Ambient Control

M2-2 - Vent Caps (5") (Unit Capacity 100-250) M2-3 - Vent Caps (6") (Unit Capacity 300-400)

P5 - 24V SPST Relay-Specify Purpose

54 - Stainless Steel Drip Pan

X5 - Horizontal and Vertical Louver Kit X8-H5 - Horizontal Combustion Air Inlet Kit, 5 inch

(Unit Capacity 100-200)

X8-H6 - Horizontal Combustion Air Inlet Kit, 6 inch (Unit Capacity 250-400)

- Vertical Combustion Air Inlet Kit, 5 inch

(Unit Capacity 100-200)

X8-V6 - Vertical Combustion Air Inlet Kit, 6 inch (Unit Capacity 250-400)

X9-DBL-5 - Air Inlet Kit, 5 inch (Unit Capacity 100-200)

X9-DBL-6 - Air Inlet Kit, 6 inch

(Unit Capacity 250-400)

Note: X9 kits allow for conversion to separated combustion and include the M2 vent cap for the combustion air inlet pipe. X8 kits allow for conversion to separated combustion and venting concentrically through one roof or wall penetration.

Ratings are shown for unit installations at elevations between o and 2,000 feet (610m). For unit installations in USA above 2,000 feet (610m), the unit input must be field derated 4% for each 1,000 feet (305m) above sea level; refer to local codes, or in absence of local codes, refer to the latest edition of the National Fuel Gas Code, ANSI Standard Z223.1 (NFPA 54). For installations in Canada, any references to deration at altitudes in excess of 2,000 feet (610m) are to be ignored. At altitudes of 2,000 to 4,500 feet (610 to 1372m), the unit must be field derated and be so marked in accordance with the ETL certification. See Installation Instructions for USA and Canadian field deration information.

Temperature Rise and Pressure Drop Graph

Duct Furnaces

- BMED SERIES
- BMES SERIES
- BMSD SERIES

Indoor Duct Furnace

Beacon Morris' line of high efficient indoor duct furnaces are designed for ducted air applications. Indoor duct furnaces are designed for use with existing systems for heating, heating / cooling or make-up air systems. Beacon Morris' indoor duct furnaces are available in 7 sizes (100 – 400 MBH) and equipped with electronic spark ignition (100% safety shutoff on LP models), 115 volt power, vent system pressure switch, high limit switch and 24 volt control transformer.

All duct furnaces are ETL certified for installation upstream or downstream from cooling coils (stainless steel heat exchangers are recommended).

Beacon Morris' products are proudly manufactured in the USA.

HEAT EXCHANGERS

All heat exchangers feature 20-gauge tubes and 18-gauge headers and are available in 3 types of steel:

- Aluminized Steel (Standard)
- 409 Grade Stainless Steel (Optional)
- 321 Grade Stainless Steel (Optional)
- Stainless steel heat exchangers recommended for applications where entering air is below 40°F (4.4°C) and/or duct furnaces are located downstream from cooling coils.

APPLICATIONS

Beacon Morris' duct furnaces are available in variable configurations to meet all application needs. BMED (bottom burner access) and BMES (side burner access) models offer integral power venting through a concentric vent for both outside combustion air and flue gas exhaust.

The BMSD (separated combustion) is designed to be installed in dusty, dirty or mildly corrosive environments, or where high humidity or slightly negative pressures exist. All critical components including the burners, pilot and flue systems are fully enclosed within the unit and protected from the elements insuring clean and efficient combustion. BMSD units are perfect for manufacturing and automotive facilities and greenhouse applications.

BMED/BMES Series (Standard Vent Position)

BMED/BMES Series (With Optional Top Vent Position)

BMSD Series

BMED/BMES Series — Power Vented Duct Furnace **BMSD** — Separated Combustion Duct Furnace

STANDARD FEATURES

- BMED Bottom Access Panel
- BMES-Side Access Panel, Right Side
- BMSD Separated Combustion
- 80% Thermal Efficiency
- Aluminized Steel Heat Exchanger -20-gauge
- Aluminized Steel Burners with **Stainless** "Burner Shade Port Protector"
- For Natural and **Propane Gases**
- Aluminized Steel Flue Collector
- 115/1/60 Supply Voltage
- Spark Ignited Intermittent Pilot with Electronic Flame Supervision
- Power Vented
- Redundant Single Stage Combustion Gas Valve
- High Limit Switch
- Control Transformer. 115/24V
- Combustion Air Pressure Switch
- Adjustable Burner Air Shutters
- Four Point Suspension
- BMSD Enclosed Combustion System
- 20-Gauge Steel Cabinet with **Baked Enamel** Finish
- BMSD-Combustion Air/ Flue Connections (see Vent Caps: Two Required per Unit)

Unit Number Description

Digit #1, 2 - Unit Type [UT]

BMED (D2) - Power Vented Duct Furnace BMSD (D3) - Separated Combustion Duct Furnace BMES (D6) - Side Service Power Vented Duct Furnace

Digit #3, 4, 5 - Capacity [CA]

- 100,000 BTU/HR 300 - 300,000 BTU/HR 150 - 150,000 BTU/HR 350 - 350,000 BTU/HR 200 - 200,000 BTU/HR 400 - 400,000 BTU/HR 250 - 250,000 BTU/HR

Digit #6 - Furnace Type [FT]

A - Right Side Access (Standard)
B - Left Side Access

Digit #7 - Heat Exchanger Construction Material [FM]

- 1 Aluminized Steel
- 2 409 Stainless Steel
- 3 321 Stainless Steel

Digit #8 - Gas Type [GT]

N - Natural Gas

P - Propane Gas (LP)

K - Natural Gas w/100% Shutoff

Digit #9 - Ignition Control [IC]

2 - Spark Ignition

Digit #10 - Altitude [AL]

A - 0-1,999 feet B - 2,000-2,999 feet **K -** 9,000-9,999 feet **L -** 10,000-10,999 feet C - 3,000-3,999 feet **D** - 4,000-4,999 feet M - 11,000-11,999 feet F - 5.000-5.999 feet ${\bf N}$ - Local Gas Supplier Derate G - 6,000-6,999 feet P - Canadian High Altitude 2,000-4,500 feet

Digit #11 - Gas Control [GC]

A - Single Stage B - Two Stage

H - Electronic Modulation w/Room Sensing

J - Electronic Modulation w/Duct Sensing

K - Electronic Modulation w/Duct Sensing & Room Ovrd, Stat L - Electronic Modulation w/External 4-20 mA Input

N - Electronic Modulation w/External 0-10 VDC Input

Digit #12 - Supply Voltage [SV]

1 - 115/1/60 2 - 208/1/60 6 - 460/3/60 3 - 230/1/60 7 - 575/3/60 4 - 208/3/60 Z - Special

Note: Supply Voltages [SV] 2-7 include field mounted step down transformer.

Digit #13 - Motor Type [MT]

0 - None/Not Applicable

Digit #14 - Motor Sizes [MS]

None/Not Applicable

Digit #15 - Accessories [AS]

FACTORY INSTALLED

A8 - Input Derate

BMSD Separated Combustion Duct Furnace — Bottom Service Access Only

^{*} Flue collar is factory supplied with unit; to be field installed per included instructions.

Accessories [AC]

FACTORY INSTALLED

A8 - INPUT DERATE Series BMED, BMES, BMSD

Factory Installed

Unit is derated up to 50% for specific applications.

K4 - FAN TIME DELAY Series BMED, BMES, BMSD

Field Installed

Thermal bi metalic type time delay is standard on all units except duct furnaces. Provides a 60 second delay on and 45 second delay off for blower operation.

K5 - AIR FLOW PROVE SWITCH Series BTD, BMED, BMES, BMSD

Factory Installed

A Dwyer 1910-0 pressure switch with an operating range of 0.15 - 0.5 inches WC.

M6 - OSHA TYPE FAN GUARD Series BXF

Factory installed available on series BXF only, standard on series BRT. Required for installations that must conform to OSHA standards. Also known as fingerproof fan guards.

M8 - DISCHARGE DUCT FLANGE ASSEMBLY Series BXC

Factory Installed

(Specify — No Charge) Used in lieu of louvers on blower units for incorporating field duct work.

P4 - TERMINAL BLOCK WIRING Series BXF, BXC, BTD, BMED, BMES, BMSD Factory Installed

Provides specific terminal designation for field wiring.

P6 - SUMMER/WINTER SWITCH Series BXF, BXC, BTD, BMED, BMES, BMSD

Factory Installed

Allows operation of fan or blower for ventilating purposes during hot summer months (manually operated).

S1 - 409 STAINLESS STEEL BURNERS Series BMED, BMES, BMSD

Factory Installed

409 stainless steel burners in lieu of the standard aluminized steel burners.

S3 - STAINLESS STEEL FLUE COLLECTOR Series BRT, BXF, BXC

Factory Installed

409 Stainless steel flue collector in lieu of standard aluminized steel collector.

S5 - STAINLESS STEEL BURNERS Series BXF, BXC, BTD

Factory Installed

304L Stainless steel in-shot burners in lieu of the standard aluminized steel in-shot

FIELD INSTALLED

A7 - PRESSURE REGULATOR 1/2-35 PSI All Series & Sizes

Field Installed

Required where main line pressure exceeds 14 inches WC (1/2 psig). Choose regulator based on three incoming pressure ranges: 1/2-10 PSI, 10-20 PSI, 20-35 PSI. One regulator per unit required, shipped separately.

E9 - CONDENSATE NEUTRALIZER (INLINE) BH Series

Field Installed

Allows for flue condensate to be neutralized prior to piping to drain. Designed to be installed in line with condensate piping.

EW - CONDENSATE NEUTRALIZER (WALL MOUNTED) BH Series

Field Installed

Allows for flue condensate to be neutralized prior to piping to drain. Designed to be wall mounted.

F1 - ONE STAGE DUCTSTAT Series BXC, BTD, BMED, BMES, BMSD

Field Installed

Single pole, double throw. 55-175°F setpoint range. [2" W x 5-5/8" H x 2-7/16" D]

F2 - TWO STAGE DUCTSTAT Series BXC, BTD, BMED, BMES, BMSD

Field Installed

Single pole, double throw. 55-175°F setpoint range. [2"Wx5-5/8"Hx2-7/16"D]

G1 - ONE STAGE (MERCURY-FREE) THERMOSTAT (ROUND) All Series and Sizes

Field Installed

Single stage heating thermostat with subbase. Includes fan switching relay. Standard round styling suitable for any decor. 40-90°F range.

G2 - ONE STAGE (MERCURY-FREE) THERMOSTAT WITH GUARD All Series and Sizes

Field Installed

Same features as "G1" except a tamper proof guard is included.

G3 - ONE STAGE (MERCURY-FREE) THERMOSTAT WITH FAN SWITCH All Series and Sizes

Field Installed

Single stage heating thermostat with fan switch. Manufactured exclusively for Beacon Morris with a "Beacon Morris' logo face plate. 50-90°F range. [2-7/8" W x 4-3/4" H x 1-1/2" D]

G5 - TWO STAGE (MERCURY-FREE) THERMOSTAT WITH FAN SWITCH All Series and Sizes

Field Installed

Two stage heating and two stage cooling with system and fan switching and built in 10°F heating/cooling differential. Includes fan relay. Heating 40-90°F range, Cooling 50-99°F. [5-13/16" W x 3-9/16" H x 1-1/2" D]

G6 - LOCKING THERMOSTAT COVER All Series and Sizes

Field Installed

Universal locking thermostat cover for use with all thermostats listed.

G9 - ONE STAGE (MERCURY-FREE) HEATING ONLY THERMOSTAT All Series and Sizes

Field Installed

Single stage heating only thermostat with subbase. 24 volt operation. 50-90°F range. [2-7/8" W x 4-3/4" H x 1-1/2" D]

GW -TH8321WF (MERCURY-FREE) WI-FI PROGRAMMABLE COMMERCIAL TOUCHSCREEN THERMOSTAT Series BH, BRT, BXF, BXC, BTD

Field Installed

Provides 7 day programmability for up to 2 stages of heating and 2 stages of cooling. Includes Wi-Fi connectivity for remote control via computer, smart phone, or tablet. Heating range 40-90°F, cooling range 50-99°F. [4-15/16" W x 4-5/8" H x 1-1/8" D]

H5 - LOW AMBIENT CONTROL Series BXF, BXC, BTD, BMED, BMES, BMSD

Field Installed

Disengages duct furnace(s) from firing in times of mild ambient temperatures.

H9 - STRATIFICATION SENSOR BH Series

Field Installed

Allows for the unit to detect when there is excess heat (air stratification) at the ceiling. During this mode, the unit will turn off the mechanical heat but the supply fan will continue to run, resulting in a lower fuel cost while still providing heat to the space.

K8 - CONDENSATE PUMP BH Series

Field Installed

For installations where gravity will not cause the condensate to flow to the drain, a condensate pump can be used to force the condensate to the drain.

K9 - CONDENSATE PUMP SHELF BH Series

Field Installed

The condensate pump shelf is designed to connect directly to the bottom of the HU series unit heater to provide a shelf for the installation of condensate pump.

Accessories [AC]

M2 - 1, 2, 3 - VENT CAP

Series BXF, BXC, BTD, BMED, BMES, BMSD

Field Installed

4 (BMED, BMES, BMSD only), 5 or 6 inch vent cap for use with series BXF, BXC, BMED, BMES, BMSD. Must indicate unit size when ordered.

M3-1 - ADAPTOR

Series BMED, BMES, BMSD

Field Installed

4 to 5 inch flue vent adaptor for use with 100 through 175 MBH power vented units. Power vented unit capacities 300, 350 and 400 require 5 to 6 inch flue vent adaptor which is supplied with the unit as standard equipment.

M4 - VERTICAL

CONCENTRIC FLUE KIT Series BMSD

Field Installed

Allows for one 8 inch vent/combustion air vertical penetration through a structure. Kit includes collection box, 5 inch flue gas vent cap and 8 inch combustion air inlet cap.

M5- HORIZONTAL CONCENTRIC FLUE KIT

Series BMSD Field Installed

Allows for one 8 inch vent/combustion air horizontal penetration through a structure. Kit includes collection box, 5 inch flue gas vent cap and 8 inch combustion air inlet cap.

M7- 2 to 4 POINT SUSPENSION KIT Series BXF

Field Installed

Kit converts 2 point unit heater suspension to 4 point.

P2 - ADJUSTABLE

HIGH LIMIT SWITCH Series BMED, BMES, BMSD

Field Installed

Adjustable switch used in conjunction with the standard header mounted high limit switch.

P3 - ADJUSTABLE FAN SWITCH Series BMED, BMES, BMSD

Field Installed

Adjustable switch used to cycle a separate blower.

P5 - 24 VOLT RELAY

All Series and Sizes

Field Installed

Specify purpose. 24 volt SPST relay.

Q1 - Y-SPLITTER NOZZLE Series BXF, BXC

Field Installed

Dual discharge nozzle allows the discharge air to be supplied in two directions. Horizontal and vertical louvers are included.

Q7 - HORIZONTAL AND VERTICAL LOUVERS Series BMED, BMES, BMSD

Field Installed

For four way deflection on duct.

S4 - 409 STAINLESS STEEL DRAIN PAN Series BTD, BMED, BMES

Field Installed

Condensate drain pan typically used when cooling coils are installed upstream of duct.

VC - 4 VENT CAP Series BRT

Field Installed

4 inch vent cap for use with series BRT.

X2 - 30° NOZZLE

Series BRT, BXF, BXC

Field Installed

Directs the discharge air at a 30 degree angle. Air can be directed up to 60 degrees by adjusting the horizontal louvers. Louvers are supplied with the unit heater and must be reinstalled in the nozzle discharge. Must indicate unit size when ordered.

X3 - 60° NOZZLE Series BRT, BXF, BXC

Field Installed

Directs the discharge air at a 60 degree angle. Air can be directed up to 90 degrees by adjusting the horizontal louvers. Louvers are supplied with the unit heater and must be reinstalled in the nozzle discharge. Must indicate unit size when ordered.

X4 - 90° NOZZLE Series BRT, BXF, BXC

Field Installed

Directs the discharge air at a 90 degree angle. Louvers are supplied with the unit heater and must be reinstalled in the nozzle discharge. Must indicate unit size when ordered.

X5 - VERTICAL LOUVER KIT Series BXF, BXC

Field Installed

Vertical Louvers to provide 4 way air deflection. Must indicate unit size when ordered.

X5 - HORIZONTAL AND VERTICAL LOUVERS Series BTD

Field Installed

For four way deflection on duct.

X7 - 4, 5 COMBUSTION AIR INLET KIT Series BRT

Field Installed

Allows for one 6 or 8 inch vent/combustion air opening through a structure. One kit permits for either horizontal or vertical applications. Kit required for converting a series BRT to separated combustion.

X7 - H5, H6 HORIZONTAL COMBUSTION AIR INLET KIT Series BXF, BXC

Field Installed

Allows for one 8 or 10 inch horizontal vent/ combustion air opening through a structure. Must indicate unit size when ordered.

X7 - V5, V6 VERTICAL COMBUSTION AIR INLET KIT Series BXF, BXC

Field Installed

Allows for one 8 or 10 inch vertical vent/ combustion air opening through a structure. Must indicate unit size when ordered.

X8 - H5, H6 HORIZONTAL COMBUSTION AIR INLET KIT

Series BTD

Field Installed

Allows for one 8 or 10 inch horizontal vent/ combustion air opening through a structure. Kit required for converting series BTD to separated combustion with single wall penetration. Must indicate unit size when ordered.

X8 - V5, V6 VERTICAL COMBUSTION AIR INLET KIT

Series BTD

Field Installed

Allows for one 8 or 10 inch vertical vent/ combustion air opening through a structure. Kit required for converting series BTD to separated combustion with single roof penetration. Must indicate unit size when ordered.

X9 - DBL - 5, 6 AIR INLET KIT

Field Installed

Kit required for converting series BTD to separated combustion. Kit includes (1) M2 Vent Cap. Must indicate unit size when ordered.

Y2 - 2" PVC CONCENTRIC VENT KIT BH Series, 50-150 MBH

Field Installed

Allows for one 4 inch vent/combustion air opening through a structure. One kit permits for either horizontal or vertical applications.

Y3 - 3" PVC CONCENTRIC VENT KIT BH Series, 200 MBH

Field Installed

Allows for one 5 inch vent/combustion air opening through a structure. One kit permits for either horizontal or vertical applications.

Y4 - 4" PVC CONCENTRIC VENT KIT BH Series, 300-400 MBH

Field Installed

Allows for one 6 inch vent/combustion air opening through a structure. One kit permits for either horizontal or vertical applications.

Heat Throw Data

NOTES: 1. All throw data shown below is for tubular unit heaters only – excludes Series BTD, BMED, BMES, BMSD, BH.

- 2. All throw data figures are approximations. Allowances should be made for optimum performance, altitude, etc.
- 3. "NR" Units not recommended at these mounting heights.
- 4. 30, 60 and 90 degree nozzles are shipped unassembled, y-splitter is factory assembled.
- 5. Only one nozzle at a time can be installed on a unit heater.

BH Series Typical Standard Specification

Furnish and install, where indicated or scheduled on plans, gas-fired unit heaters manufactured by Beacon Morris. All heaters are to have a minimum thermal efficiency of 95%. The heat exchanger consists of stainless steel tubes with brass and aluminum fins. Burners shall be metal fiber mesh type constructed of stainless steel. A direct spark ignition system with integrated control and redundant gas valve shall be utilized. Flame rectification shall be independent of the spark igniter allowing true indication of complete ignition of the burner. Most cabinetry and trim pieces shall be fabricated of 20-gauge 430 brushed stainless steel.

All line voltage wiring shall be completely enclosed in flexible conduit. Heaters shall be equipped with a 120/24 volt controls transformer. Factory wiring shall permit the use of propeller fan for continuous air circulation when combined with manufacturer's (optional) 24-volt summer/winter single stage thermostat. The main control board and pressure switch shall be factory mounted in a control box located on the rear of the unit; this panel creates easy access to all control wiring. External LEDs shall be located on the bottom of the control box for ease of troubleshooting.

Units will be equipped with a low voltage automatic reset high temperature control, wired to de-energize the main gas valve and maintain fan or blower operation until the high temperature control resets. Units will be equipped with 120/1/60 volt motors, which include internal automatic reset thermal overload protection. Unit fans will be hubbed with aluminum blades and have fan guard protection. HU units with inputs equal or greater than 200,000 BTUs shall be equipped with dual motors and fan blades for optimum air distribution. Fans shall be equipped with OSHA fan guards as standard. Adjustable and individually removable horizontal louver blades shall be provided on all units for directing air flow.

Unit shall have integral condensate float switch to de-energize main control board in the event of condensate pipe blockage. Condensate trap shall be included with unit for field install.

All units and component assemblies shall be warranted for a period of one year from the date of shipment from the factory or 18 months from the date of manufacture, whichever occurs first. All burners, heat exchangers, and flue collectors shall carry a ten year non-prorated limited warranty on materials and workmanship (subject to appropriate disclaimers).

BRT SeriesTypical Standard Specification

Furnish and install, where indicated or scheduled on plans, gas-fired unit heaters manufactured by Beacon Morris. All heaters are to have a minimum thermal efficiency of 82%. The heat exchanger consists of aluminized steel tubes not lighter than 20-gauge. Burner system is to be of the "single-orifice burner" design. A direct spark ignition system with integrated control and redundant gas valve shall be utilized. Flame rectification shall be independent of the spark igniter, allowing true indication of complete ignition of the burner. Most cabinetry and trim pieces shall be fabricated of 20-gauge material, and finished with a baked gray enamel.

Units to be vented horizontally or vertically via standard combustion one-pipe configuration or separated combustion two-pipe configuration. When necessary to vent separated combustion concentrically through one wall or roof penetration, an optional combustion air inlet kit will be made available.

Heaters shall be equipped with a 120/24 volt transformer; factory wiring shall permit the use of propeller fan for continuous air circulation when combined with manufacturers (optional) 24 volt summer/winter single stage thermostat. The control transformer and pressure switch shall be factory mounted in a main control

cabinet located on the side of the unit; the side panel is removed to create easy access and all wiring information will be indicated on the inside control cabinet.

Units will be equipped with a low voltage automatic reset high temperature control, wired to de-energize the main gas valve and maintain fan operation until the high temperature control resets. Units will be equipped with 120/1/60 volt motors which include internal automatic reset thermal overload protection. Fans will be hubbed with aluminum blades and have OSHA-approved fan guard protection. Adjustable and individually removable horizontal louver blades shall be provided for directing air flow.

All units and component assemblies shall be warranted for a period of one year from the date of shipment from the factory or 18 months from the date of manufacture, whichever occurs first. All burners, heat exchangers, and flue collectors shall carry a ten year non-prorated limited warranty on materials and workmanship (subject to appropriate disclaimers).

BXF/BXC SeriesTypical Standard Specification

Furnish and install, where indicated or scheduled on plans, gas-fired unit heaters manufactured by Beacon Morris. All heaters are to have a minimum thermal efficiency of 83%. The heat exchanger consists of aluminized steel tubes not lighter than 20-gauge. Burners are to be of the "in-shot" design. A direct spark ignition system with integrated control and redundant gas valve shall be utilized. Flame rectification shall be independent of the spark igniter allowing true indication of complete ignition of the burner. Most cabinetry and trim pieces shall be fabricated of 20-gauge material and finished with a baked gray enamel

All line voltage wiring shall be completely enclosed in flexible conduit. Heaters shall be equipped with a 120/24 volt controls transformer. Factory wiring shall permit the use of propeller fan on BXF units and blower on BXC units, for continuous air circulation when combined with manufacturer's (optional) 24-volt summer/winter single stage thermostat. The control transformer and pressure switch shall be factory mounted in a main control panel located on the side of the unit; this panel creates easy access and all wiring information will be indicated on the inside control panel door.

Units will be equipped with a low voltage automatic reset high temperature control, wired to de-energize the main gas valve and maintain fan or blower operation until the high temperature control resets. Units will be equipped with 120/1/60 volt motors, which include internal automatic reset thermal overload protection. BXF unit fans will be hubbed with aluminum blades and have fan guard protection. BXF units with inputs greater than 250,000's BTU's shall be equipped with dual motors and fan blades for optimum air distribution. BXC units shall have centrifugal blowers with an OSHA type belt guard. BXC units with inputs greater than 250,000 BTU's shall be equipped with dual blowers on a single shaft for optimum air distribution. Adjustable and individually removable horizontal louver blades shall be provided on all units for directing air flow.

Units to be vented horizontally or vertically via standard combustion one-pipe configuration or separated combustion two-pipe configuration. When necessary to vent separated combustion concentrically through one wall or roof penetration, an optional combustion air inlet kit will be made available.

All units and component assemblies shall be warranted for a period of one year from the date of shipment from the factory or 18 months from the date of manufacture, whichever occurs first. All burners, heat exchangers, and flue collectors shall carry a ten year non-prorated limited warranty on materials and workmanship (subject to appropriate disclaimers).

BTD SeriesTypical Standard Specification

Furnish and install where shown on plans, Gas-Fired Tubular Duct Furnaces as made by Beacon Morris.

All units and components are to be warranted (subject to appropriate disclaimers) from defects in material and workmanship for a period of one year from date of shipment from the factory. Heat Exchanger, draft hood assembly, and burners will be free from defects in material or workmanship for a period of ten (10) years from the date of manufacture.

Beacon Morris Model BTD Tubular Duct Furnaces are completely factory assembled, piped, wired and test fired. All models are ETL certified as having 82% thermal efficiency and for operation on either natural or LP (propane) gas. All models conform to the latest ANSI Standards for safe and efficient performance.

All sizes have exceptionally low pressure drop, making it possible to handle large volumes of air without using an axillary by-pass. Beacon Morris duct furnaces are tested to operate against 2.0 inches water column pressure.

Casings shall be double wall construction consisting of a 20-gauge exterior panel, 1/2 inch Microlite insulation and 16-gauge interior liner. Exterior and interior panels shall be finished in baked enamel. Burners shall be aluminized steel and shall be of in-shot design. Heat exchangers and flue collector shall be aluminized steel or 409 stainless steel. Tubes shall not be lighter than 20-gauge.

All models are equipped with direct spark ignition, 115 volt power venter, vent system pressure switch, high limit switch, fan time delay and 24 volt control transformer. Units are provided with a four-point suspension system.

All models must be vented utilizing our standard two-pipe method or our optional certified Air Inlet Kit or Combustion Air Inlet kit for concentric venting.

BMED/BMES/BMSD SeriesTypical Standard Specification

Furnish and install where shown on plans, gas-fired duct furnaces as made by Beacon Morris. Burners shall be pressed aluminized steel or 409 stainless steel, and shall have stainless steel port protectors. Heat exchangers shall be aluminized steel, 409 stainless steel or 321 stainless steel. Tubes shall not be lighter than 20-gauge. Headers shall not be lighter than 18-gauge. Furnaces to be of neat appearance and good workmanship. All units and components are to be warranted (subject to appropriate disclaimers) from defects in material and workmanship for a period of one year from date of shipment from the factory. All sizes have exceptionally low pressure drop, making it possible to handle large volumes of air without using an axillary by-pass. Beacon Morris duct furnaces are tested to operate against 2.0 inches water column pressure.

All models are equipped with electronic spark ignition (100% safety shutoff on LP models), 115 volt power venter, vent system pressure switch, high limit switch, fan time delay and 24 volt control transformer.

Indoor Duct Furnaces are completely factory assembled, piped, wired and test fired. All models conform to the latest ANSI Standards for safe and efficient performance. Units are provided with a four-point suspension system and are available for operation on either natural or LP gas.

Casings are die-formed 20-gauge bonderized steel, finished in baked enamel. Burners are accessible through a removable, bottom panel (BMED & BMSD only). Burners are accessible through a removable, side panel (BMES only).

Optum High Efficiency Unit Heaters, Tubular Unit Heaters, and BTD Duct Furnaces

LIMITED WARRANTY

- 1. Beacon Morris ("the Manufacturer") warrants to the original owner at original installation site that the above models of Beacon Morris Gas-Fired Heaters ("the Product") will be free from defects in material or workmanship for one (1) year from the date of shipment from the factory, or one and one-half (1-1/2) years from the date of manufacture, whichever occurs first. Beacon Morris further warrants that the complete heat exchanger, flue collector, and burners will be free from defects in material or workmanship for a period of ten (10) years from the date of manufacture. If upon examination by the Manufacturer the Product is shown to have a defect in material or workmanship during the warranty period, the Manufacturer will repair or replace, at its option, that part of the Product which is shown to be defective.
- 2. This limited warranty does not apply:
 - (a) if the Product has been subjected to misuse or neglect, has been accidentally or intentionally damaged, has not been installed, maintained or operated in accordance with the furnished written instructions, or has been altered or modified in any way by any unauthorized person.
 - (b) to any expenses, including labor or material, incurred during removal or reinstallation of the Product.
 - (c) to any damage due to corrosion by chemicals, including halogenated hydrocarbons, precipitated in the air.
 - (d) to any workmanship of the installer of the Product.

- 3. This limited warranty is conditional upon:
 - (a) advising the installing contractor, who will in turn notify the distributor or manufacturer.
 - (b) shipment to the Manufacturer of that part of the Product thought to be defective. Goods can only be returned with prior written approval of the Manufacturer. All returns must be freight prepaid.
 - (c) determination in the reasonable opinion of the Manufacturer that there exists a defect in material or workmanship.
- Repair or replacement of any part under this Limited Warranty shall not extend the duration of the warranty with respect to such repaired or replaced part beyond the stated warranty period.
- 5. THIS LIMITED WARRANTY IS IN LIEU OF ALL OTHER WARRANTIES, EITHER EXPRESS OR IMPLIED, AND ALL SUCH OTHER WARRANTIES, INCLUDING WITHOUT LIMITATION IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, ARE HEREBY DISCLAIMED AND EXCLUDED FROM THIS LIMITED WARRANTY. IN NO EVENT SHALL THE MANUFACTURER BE LIABLE IN ANY WAY FOR ANY CONSEQUENTIAL, SPECIAL, OR INCIDENTAL DAMAGES OF ANY NATURE WHATSOEVER, OR FOR ANY AMOUNTS IN EXCESS OF THE SELLING PRICE OF THE PRODUCT OR ANY PARTS THEREOF FOUND TO BE DEFECTIVE. THIS LIMITED WARRANTY GIVES THE ORIGINAL OWNER OF THE PRODUCT SPECIFIC LEGAL RIGHTS. YOU MAY ALSO HAVE OTHER RIGHTS WHICH MAY VARY BY EACH JURISDICTION.

Duct Furnaces

1 YEAR LIMITED WARRANTY UNIT TYPE BMES, BMED, BMSD

Duct Furnaces and Separated Combustion Duct Furnace are warranted by Beacon Morris to be free from defects in materials and workmanship for a period of one (1) year from date of shipment from Beacon Morris' Plant.

Beacon Morris will repair or replace, at its option, any components which, upon inspection, it finds to be defective, provided that the unit has been operated within its listed capacity, has been installed in accordance with the furnished instructions, has not been misused or subject to negligence and has received reasonable and necessary maintenance.

This warranty does not cover loss due to corrosion by chemicals precipitated in the air such as halogenated hydrocarbons.

Beacon Morris will in no event be liable for incidental or consequential damages of any kind whatsoever.

Written permission is required prior to the return of defective components. All returns must be sent with all transportation charges prepaid to the plant designated in the written permission.
