

#### Function:

Oventrop thermostatic radiator valves in combination with Oventrop thermostats are proportional regulators working without auxiliary energy. They regulate the room temperature by varying the volume flow of the heating water.

Oventrop thermostatic radiator valves comply with the requirements of the German Energy Saving Directive and allow for the design of thermostatic radiator valves with a proportional control range of 1 to 2 Kelvin.

#### Technical data

- Nominal flow rate: (see charts)
- Max. flow of heating water: (see charts)
- Max. differential pressure against which the valve closes:
  - 1 bar: "A", "AV 9", "CV 9", "ADV 9", "RF", "RFV 9"
  - 3 bar: "AF"
- Valve body material: Bronze, brass, nickel plated
- Differential pressure effect: 0.1 K-0.7 K/0.5 bar
- Fluid: Water or suitable ethylene/propylene glycol water mixtures according to VDI 2035/ÖNORM 5195 (max. glycol proportion 50 %, ph value 6.5-10). Not suitable for steam, oily and aggressive fluids.

**KEYMARK** - The Oventrop thermostatic radiator valves "A", "AV 9", "RF", "AV 6", "AF" (angle and straight pattern valves DN 10-DN 20) and "AZ H" (straight pattern valves DN 20 + DN 25) with the thermostats "Uni XH", "Uni LH", "Uni SH", "vindo TH", "pinox H", "Uni LGH", "Uni L" and "Uni LH" with remote sensor as well as the thermostatic radiator valve "VN" with the thermostat "Uni LD" are Keymark tested and certified (reg.-no. 011-6T0002).

Refer to the installation instructions for more details.

Straight pattern valve "AV 9"

"Bypass-Combi Uno"

Radiator valve with horizontal/vertical insertion tube

**Tender specification**

**Oventrop thermostatic radiator valve "AV 9"**

With infinitely adjustable presetting visible from outside to adapt the volume flows to the required heat demand.

Operating temperature  $t_s$ : 2 °C up to 120 °C (for short periods up to 130 °C)

Max. operating pressure  $p_s$ : 10 bar

Recommended differential pressure control range: 30 up to 200 mbar

Max. differential pressure: 1 bar

Body made of nickel plated brass, stem made of stainless steel with double stem seal.

Connection thread M 30 x 1.5

Connection for threaded and copper pipes or composition pipe "Copipe".

Complete valve insert replaceable by using the special tool "Demo-Bloc" without draining the system.

**Oventrop thermostatic radiator valve "CV 9"**

**chrome plated**

With infinitely adjustable presetting visible from outside to adapt the volume flows to the required heat demand.

Operating temperature  $t_s$ : 2 °C up to 120 °C (for short periods up to 130 °C)

Max. operating pressure  $p_s$ : 10 bar

Recommended differential pressure control range: 30 up to 200 mbar

Max. differential pressure: 1 bar

Body made of chrome plated brass, stem made of stainless steel with double stem seal.

Connection thread M 30 x 1.5

Connection for threaded and copper pipes or composition pipe "Copipe".

Complete valve insert replaceable by using the special tool "Demo-Bloc" without draining the system.

**Angle pattern valve with press connection**

For the direct connection of copper pipes according to DIN EN 1057/DVGW GW 392, stainless steel pipes according to DIN EN 10088/DVGW GW 541 and thin walled C-steel pipe according to DIN EN 10305-3. Pressing must be carried out to tighten the connection. Only use press jaws with the original contours SANHA (SA), Geberit-Mapress (MM) or Viega (V) in corresponding size. Processing must be carried out according to the installation instructions.

**Oventrop thermostatic radiator valve "ADV 9"**

With infinitely adjustable presetting visible from outside to adapt the volume flows to the required heat demand.  
 The double function of this valve provokes and automatic closing of the valve to 5% of the nominal flow (frost protection) should the thermostat be removed or destroyed.  
 Not suitable for use with electric actuators.  
 Operating temperature  $t_s$ : 2 °C up to 120 °C (for short periods up to 130 °C)  
 Max. operating pressure  $p_s$ : 10 bar  
 Recommended differential pressure control range: 30 up to 200 mbar  
 Max. differential pressure: 1 bar

Distance between pipe centres: 35 mm  
Perforation 14-20 mm 1016684

**Reinforcing sleeves** see page 4, column 2.

**Valve inserts:**

Stem made of stainless steel with double seal.  
All valve inserts (except for valve insert for three-way conversion valves) may be combined with all thermostatic radiator valve bodies.

**“AV 9” Valve insert with infinitely adjustable presetting**  
suitable for all thermostatic radiator valves/fittings  
“AV 9”, “RFV 9”, “CV 9”, “E”  
and “Multiblock T-RTL” (manufactured since 2016) 1187047

**“AV 6” Valve insert with presetting**  
suitable for all thermostatic radiator valves/fittings  
“AV 6”, “RFV 6”, “E”  
and “Multiblock T-RTL” (manufactured since 2016) 1187057

**“A” Valve insert**  
suitable for all thermostatic radiator valves  
“A” (manufactured since 2013) and “RF” (manufactured since 2014),  
DN 20 - DN 32,  $k_v = 1.00-1.10$  1187049

**“A” Valve insert**  
suitable for all thermostatic radiator valves  
“A” and “RF” (manufactured since 2015),  
DN 10 - DN 15,  $k_v = 0.95$  1187059

**“AF” Valve insert with infinitely adjustable fine presetting**  
suitable for all thermostatic radiator valves “AF” 1187352

**“QA” Valve insert with “Q-Tech” and infinitely adjustable presetting**  
suitable for all thermostatic radiator valves/fittings  
“AQ”, “RFQ”, “EQ”, “Multiblock TQ/TQ-RTL”  
and “Unibox TQ/Q plus” 1187065

**Replacement filter mesh for valve insert “QA”** 1187090

**“ADV 9” Valve insert with double function and infinitely adjustable presetting**  
suitable for all thermostatic radiator valves “ADV 9” 1186002

**“ADV 6” Valve insert with double function and presetting**  
suitable for all thermostatic radiator valves “ADV 6” 1186001

**“PTB” Valve insert**  
with linear flow characteristic line  
 $kvs = 0.45$  (P1) 1186052

**“PTB” Valve insert**  
with linear flow characteristic line  
 $kvs = 0.80$  (P2) 1186053

**Valve insert with stainless steel seat**  
for conversion of the thermostatic radiator valves “A” and “RF”,  
especially suitable for steam installations 1186200

**Valve insert with presetting**  
suitable for all three-way conversion valves 1187056

**Special valve insert**  
for reversed supply and return pipe for thermostatic radiator valves “A”, “AV 9”, “AV 6”, “ADV 9”, “ADV 6”, “CV 9”, “E”, “AF”, “RF”, “RFV 9”, “RFV 6” 1187070

**Special valve insert with infinitely adjustable presetting**  
for reversed supply and return pipe  
suitable for the valve bodies of the  
“Unibox T”, “Unibox TQ”, “Unibox plus”  
“Unibox vario”, “Unibox Q plus” 1187078  
As replacement for:  
“Multiblock T/TU/TFU”, “Unibox E plus”, “Unibox ET”,  
“Unibox E vario”, “Unibox E BV”

**Gland nut**  
for all thermostatic radiator valves (except for:  
“A” (manufactured since 2013), “AV 9”, “AV 6”, “CV 9”, “E”,  
“RFV 6”, “RFV 9”, “ADV 9”, “ADV 6”, “AQ”, “RFQ”,  
“EQ”, “RF” (manufactured since 2014), “GH” and “GD”) 1017501

Models

Thermostatic radiator valves "AV 9", "RFV 9" and "CV 9"

Model with infinitely adjustable presetting; for central heating system with normal temperature difference.

The valves "AV 9", "RFV 9" and "CV 9" are fitted with a valve insert with infinitely adjustable presetting and allow for a problem-free adaptation of the volume flows.

Thermostatic radiator valve "ADV 9"

Model with infinitely adjustable presetting and double function.

The double function provokes an automatic closing of the valve to 5% of the nominal flow (frost protection) should the thermostat be removed or destroyed.

Thermostatic radiator valves "A" and "RF"

Model for all one and two pipe heating systems.

Adaptation of the volume flows is carried out via the pre-settable radiator lockshield valve (e.g. "Combi 4").

Thermostatic radiator valves "AF"

Model with infinitely adjustable fine presetting; for central heating systems with high temperature difference and low flow rates.

"Bypass-Combi"

One pipe radiator valve "Bypass-Combi Uno"

Installation set for a problem-free installation of one pipe heating systems.

Radiator valves with insertion tube

Radiator valves with insertion tube for one pipe heating systems

Chart 7

Oventrop thermostatic radiator valves "AZ H"

Chart 8

Design ranges Oventrop thermostatic radiator valves “A”, “AV 9”, “CV 9”, “RF”, “ADV 9”, “RFV 9” and “AF”

Example:  $q_m = 120 \text{ kg/h}$ ,  $\Delta p = 30 \text{ mbar}$ ,  $k_v = 0.7$  (read off flow chart).  
Valves “A” and “RF” can be used. Choice of valves see charts 1-6.

**Radiator valve design:**

Oventrop thermostatic radiator valves permit “room-by-room” adaptation of the heat output by using

- thermostatic radiator valve with infinitely adjustable presetting (“AV 9”, “CV 9”, “RFV 9”, “ADV 9” with infinitely adjustable presetting and “AF” with infinitely adjustable fine presetting)
- thermostatic radiator valves without presetting (“A” and “RF”) combined with presettable radiator lockshield valves “Combi 4”, “Combi C”, “Combi 3” and “Combi 2”.

**Official approvals:**

Oventrop thermostatic radiator valves comply with:

- the EN 215 standard (KEYMARK tested and certified, reg.-no. 011-6T0002)
- BS 7556 standard

In addition, the Oventrop thermostatic radiator valves “AF” comply with:

- the directives of the Association for District Heating (AGFW, work sheet FW 507).
- the conditions of the company ESSO AG (TA list).

The Oventrop thermostatic radiator valves fulfil the demands of the German Energy Saving Directive (EnEV). They are “automatic devices for individual room temperature control” (EnEV §14).

Chart 9

Oventrop one pipe radiator valve “Bypass-Combi Uno” with a distance of 50 mm between the pipe centres (complete valve set) with thermostatic radiator valve “A”  
 All patterns at 2 K P-deviation

**Valve design of “Bypass-Combi Uno” with a distance of 50 mm between the pipe centres**

Before leaving the factory, the distributor is adjusted to a radiator flow share of 35 % at 2 K P-deviation (valves “A”). This setting can be restored at any time by first turning the setting screw clockwise until stop and then turning it back anticlockwise by 3.25 turns.

The infinitely presettable bypass provides the optimum design of the heating system. There is a reciprocal relationship between the following three values:

- Radiator share
- Radiator heat output
- Pressure loss

By fixing any of these three values, the other two are determined. To achieve optimum matching of radiator output and pressure loss (pump output), preference can often be given to establishing the lowest possible  $\Delta p$  pressure loss (low pump running costs).

**Valve design of one pipe connection piece “Uno” with a distance of 35 mm between the pipe centres**

The distributor is preset at works to a radiator flow share of 50 % at 2 K P-deviation (valves “A”).

**Valve design of radiator valves with insertion tube**

The valves have a fixed radiator flow share of 35 % at 2 K P-deviation.  $k_v$  value: 1.8

Even with the valves being closed, radiators in one pipe heating systems can become slightly warm due to the heat flow through the bypass.

**Valve design of valve for “TKM “ system (one pipe)**

The valve is preset at works to a radiator flow share of 50 % at 2 K P-deviation.  $k_v$  value: 1.5

P-deviation	2 K				
Number of turns of setting screw	2	2.25	2.5	3.25	6
$k_v$ value	1.55	1.63	1.72	1.88	2.05

**Note:**

The protection cap is provided with 7 graduations. The change from one graduation to another corresponds to an alteration of the flow rate of 1 K P-deviation at the valve.

The protection cap may not be used for a permanent closure of the valve, e.g. while radiator is removed. A metal cap has to be fitted to the connection nipple at the outlet port of the valve.

Subject to technical modifications without notice.
