

**PERFORMANCE. VALUE. SELECTION.
MEET RBI.**

RBI®
RELIABLE. BOLD. INNOVATIVE.

CONDENSING BOILERS

With efficiency levels reaching 99%, RBI's series of condensing boilers and water heaters ensure that efficiency this high is now within reach. And with unique condensing boilers available, we're sure that we have a high efficiency boiler option that will not only live up to the RBI name, but will tackle whatever challenge you throw its way.

Torus

Torus® watertube condensing commercial boilers and water heaters bring next level performance in a small compact footprint to today's applications.

The RBI tradition of high quality, performance equipment in a user-friendly design continues with Torus.

Incorporating all industry-proven components including HeatNet 3.0 touchscreen cascade control, Tru-Flow fuel/air coupling system with 10:1 turndown and capacities to 4000 MBH Torus has the solution for all commercial installations.

Features and Benefits

- 1250 – 4000 MBH
- Up to 97.5% AHRI Certified Boiler Efficiency
- Full Modulation up to (10:1 water heater / 10:1 boiler)
- 4 Pass Double-Row Watertube Heat Exchanger (160 psi/ASME (H & HLW) Stamp)
- 316L Stainless Steel
- Variable Volume, Full Flow and Primary/Secondary
- Sika Vortex Flow Sensor
- HeatNet 3.0 Integrated Control Platform
- Touchscreen Programming and Diagnostics
- Modbus, LonWorks and BACnet BMS Integration
- Low NOx and CO
- Easy Maintenance and Installation
- Category II and IV (up to 160')
- PVC/CPVC, Polypropylene (PP) and Stainless Steel Vent Approved
- Warranty (Heat Exchanger): 10-year Boiler; 5-year Water Heater; 21-year Thermal Shock
- NG/LP/Dual Fuel
- Outdoor Installation
- Top Inlet/Outlet Water Connections (Optional with Indoor Models Only)

Torus heat exchangers are designed for optimum performance and durability. Made from an industrial quality 316L stainless steel Torus heat exchangers are reliable and robust while being very resistant to both thermal shock and acidic condensate.

A unique 4-pass design works in concert with a new multi-channel manifold and increased tube diameters resulting in ultra-high efficiency with very low pressure drop.

Torus heat exchangers are manufactured with an industrial quality 316L stainless steel through a process called tube hydroforming. Tube hydroforming allows the shaping of stainless-steel tubes that are not only stronger and lighter but also have a higher quality surface than competitive heat exchangers maximizing both performance and durability in a compact design.

Hydroforming insures a uniform and consistent gap between the tubes facilitating consistent exhaust gas circulation and uniform heat transfer throughout the entire heat exchanger.

Torus' BlueJet® burner offers industry leading modulation capacity, flame retention and combustion quality. Whether natural gas or LP gas, BlueJet's low NOx design works in perfect concert with our Tru-Flow fuel/air system providing consistent reliable operation.

4-Pass Watertube Heat Exchanger

Torus heat exchangers use a 4-pass system for maximum efficiency. The unique path of water throughout the heat exchanger is designed to absorb as much heat energy as possible.

Pass 1: Return water passes through the first set of inner tubes absorbing residual heat energy.

Pass 2: Water passes through the exhaust gas chamber

Pass 3: Outer tubes of the combustion chamber

Pass 4: Supply water distribution final pass through the inner tubes of the combustion chamber

Ease of Service

Torus just may be the easiest piece of equipment ever to service. A unique burner door system provides easy access to both the burner and heat exchanger tube bundle. All burner doors come with a slide and hinge mechanism that easily slides outwards offering full access to the combustion chamber for annual inspection and service.

FlexCore

FlexCore Symmetrical Firetube boilers bring hydronic heating products to unprecedented levels of operating efficiency.

FlexCore was designed, developed and engineered by the experts at RBI.

Engineered for performance and longevity, FlexCore utilizes a perfectly temperature-balanced heat exchanger that provides not only the highest efficiencies but also a durability beyond that of any competitive firetube boiler on the market.

- 850 - 6,000 MBH
- 96.8% AHRI Certified
- Full Modulation (5:1)
- Symmetrical Firetube Heat Exchanger
- Variable Volume, Full Flow and Primary Secondary Systems
- Sika Vortex Flow Sensor
- Patented "Turbo Pilot" 8,000 BTU/h Ignition
- HeatNet 3.0 Integrated Control Platform
- Touchscreen Programming & Diagnostics
- Modbus, LonWorks, BACnet BMS Integration
- Low NOx & CO
- Easy Installation & Maintenance
- Category II and IV (up to 160')
- PVC/CPVC & Polypropylene (PP) and Stainless Steel Vent (up to 100')
- Warranty (Heat Exchanger) 10-year; 21-Year Thermal Shock
- Natural Gas Only
- Modern Jacket Design
- Superior Durability
- Versatile Footprint Fits Through 36" Door (ALL SIZES)

All “firtube” boilers are designed to do the same thing: Heat water in an efficient manner.

That is where the comparison ends!

The RBI difference...

FlexCore Symmetrical Firtube boilers are designed for the long haul with no tradeoffs in efficiencies. In order to operate at premium condensing efficiencies many factors come into play that can affect the design, performance and, as importantly, the durability.

FlexCore is engineered to provide perfect temperature symmetry around an ultra-high efficient core. Flue gas temperatures are even and a consistent temperature rise across all the tubes results in a unrivaled $<5^{\circ}$ temperature difference across the heat exchanger with NO intra-tubular stresses as seen in many of today’s competitive designs.

RBI “flexes” its strength by design. At its core is a piston-like heat exchanger engineered to eliminate the expansion and contraction stresses seen in today’s boilers by creating a temperature balanced symmetrical upper tube sheet reminiscent of a diaphragm that absorbs the stresses from this piston-like motion at any water temperature delta.

Condensate is removed through FlexCore’s linear design resulting in ultra-high efficiencies in a compact design with minimal corrosive effects.

FlexCore scrubs every last bit of heat from the combustion gases keeping stresses low and efficiencies high at all modulation rates, making FlexCore the most efficient boiler on the market today.

**The Turbo Pilot[®],
Rugged & Reliable**

FlexCore uses our patented Turbo Pilot system.

RBI’s Turbo Pilot is a robust 8,000 BTU/h ignition system, Turbo Pilot is far more reliable and durable than any ignition system on the market.

The Turbo Pilot with UV detection gives burner ignition a surefire, powerful ignition source even in applications with fluctuating gas pressures.

SIKA Flow Sensor

All FlexCore units also come standard with SIKA vortex flow sensors to monitor boiler total flow (GPM). SIKA flow sensors utilize vortex technology which is then converted to an electrical signal sent directly to the HeatNet Boiler Management System for real time flow annunciation.

Patented Turbo Pilot
8,000 BTU/h Surefire Ignition System

Futera Fusion XLF

2,500–4,000 | 5:1 Modulation

As a fully condensing boiler and water heater, the Fusion XLF features an innovative design that brings superior power and energy efficiency with premium boiler performance and serviceability, all together in an unprecedented, industry-leading, small-package design.

Ideal for commercial boiler applications with low operating, return or make-up water temperatures, the Fusion XLF is capable of reaching efficiencies as high as 99% at full input. With full modulation up to 5:1 in a single unit, the firing system continuously varies the energy input to match the heating load without overfiring and wasting fuel – providing extremely high part-load efficiencies.

The Fusion XLF also features HeatNet 3.0, an intuitive boiler control system that monitors system characteristics and modulates boiler firing rates, maximizing turndown ratios and maintaining peak efficiency, regardless of the load.

- Up to 99% Efficiency
- Full Modulation with Continuous, 5:1 Turndown
- Symmetrically Air/Fuel Coupled
- Commercial Combustion Controls
- HeatNet 3.0 Integrated Boiler Control Platform
- Gasketless Heat Exchanger Assembly

Futera Fusion

500–2,000 MBH | 4:1 Modulation

Unlike most condensing boilers and water heaters that produce the highest efficiencies at the lowest inputs, the Futera Fusion can attain efficiencies as high as 99% at full input. The full modulation firing system continuously varies the energy input to precisely match heating load without overfiring or wasting fuel.

The Futera Fusion's heat exchanger was designed using a low-mass, gasketless primary heat exchanger with finned copper tube or Cupro-Nickel tubing – providing superior heat transfer, resistance to scaling and protection against thermal shock.

The condensing secondary heat exchanger is constructed from solid stainless steel and is designed to operate at the boiler's full flow rate. The unit operates in full condensing mode at all times, while a state-of-the-art temperature mixing system protects the boiler's primary heat exchanger. In addition, this design also offers a larger heat transfer surface area – more so than any competitive product currently available.

- Full Modulation with Continuous, 4:1 Turndown
- Symmetrically Air/Fuel Coupled
- Commercial Combustion Controls
- HeatNet 3.0 Integrated Boiler Control Platform
- Gasketless Heat Exchanger Assembly

POOL HEATERS

It's a well-known fact that pools are an investment – and these investments require maintenance. With that in mind, what's the use of a pool heater that will kick the proverbial bucket before the summer is over? RBI's commercial pool heaters are built to outlast the competition – and the busy summer season – year after year.

Infinite Energy₂

199–1,000 MBH | Up To 20:1 Modulation

Infinite Energy₂ is available from 199 to 1000 MBH, providing flexible solutions for all of your heating and domestic hot water system needs. Utilizing state-of-the-art Radial Variable Circulation (RVC) stainless steel heat exchangers, IE₂ maximizes heat transfers and can achieve operating efficiencies up to 98%.

Using all of today's modern technologies, including pre-mix burners, modulating firing rates up to 20:1 single unit modulation and integrated cascade controls, IE₂ offers superior performance and application flexibility. Units are PVC, polypropylene and stainless steel vent capable and can be installed in multiple unit configurations using its onboard boiler control configuration – providing flexible modulation and maximum efficiencies.

- Up to 98% Ultra-High Efficiency
- RVC Stainless Steel Heat Exchanger
- PVC, PP and Stainless Steel Venting
- Intuitive Integrated Control Platform
- Multi-unit Cascade Communication
- Pre-Mix Burner Technology
- Low NOx and CO Emissions
- 3" Minimum Gas Pressure
- 160 PSI Working Pressure
- Integrated Condensate Neutralizer System

NEAR-CONDENSING BOILERS

Delivering efficiencies up to 88%, RBI's selection of near-condensing boilers and water heaters are built for use in high efficiency applications that do not require condensing equipment. Capable of full modulation with reduced footprints, all RBI near-condensing models are constructed for simple installation and maintenance.

Futera XLF

2,500–10,000 MBH | 5:1 Modulation

RBI's Futera XLF gives you the power and flexibility to fit any commercial application. Available in 2,500 to 10,000 MBH, the Futera XLF has operating efficiencies up to 88% and turndown ratios of 5:1 for maximum energy optimization. The Futera XLF provides advanced, efficient performance with unmatched outputs, all within a compact footprint.

The Futera XLF features integral HeatNet 3.0 boiler control software that can act as a boiler management system, capable of networking up to sixteen units without requiring any external boiler control panel. With such advanced performance in a small space, even older boiler systems can benefit from the addition of contemporary efficiency for existing heating or domestic hot water systems. For new construction, the Futera XLF provides a modular configuration with an output unmatched by today's market.

- 88% Maximum Efficiency
- Cast Iron Headers (Boilers)
- Bronze Headers (Water Heaters)
- Full Modulation with Smooth, 5:1 Turndown
- Finned Copper Tube Heat Exchanger
- HeatNet 3.0 Integrated Boiler Management System
- Full Color Touchscreen Display – Standard Sizes 6,000 – 10,000
- Turbo Pilot Sure-Fire Ignition
- Multiple Venting Options
- Category I, II and IV Venting

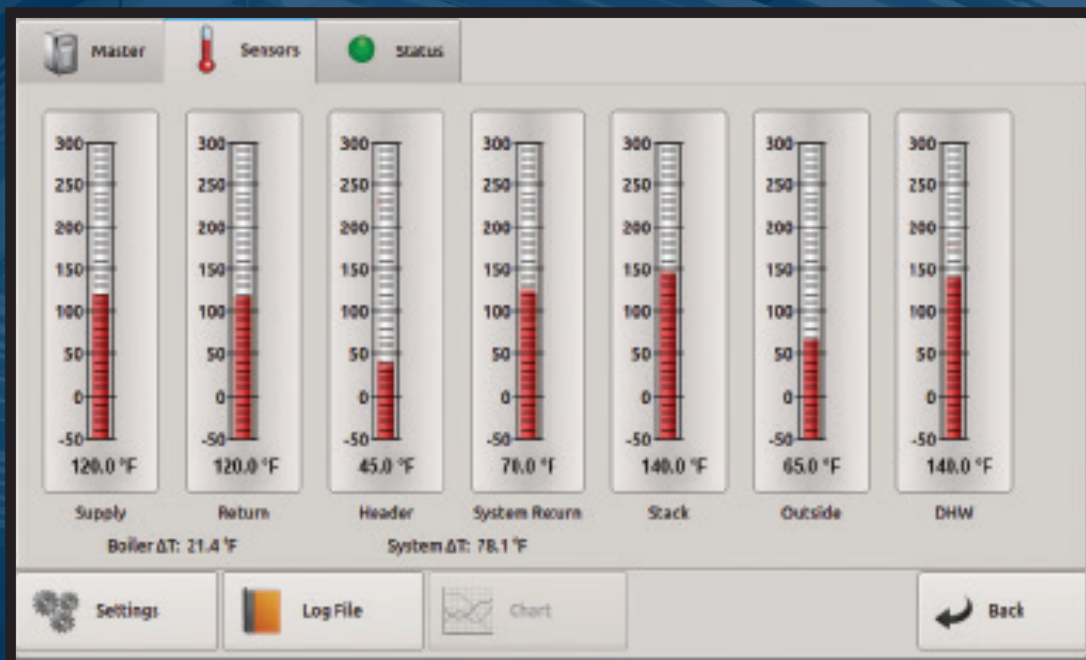

HeatNet 3.0 is an innovative, digital Boiler Management System that provides consistency and feedback through digital communication. By continuously monitoring several system characteristics, HeatNet 3.0 modulates boiler-firing rates to maximize turndown ratios and maintain peak efficiency – no matter the load.

HeatNet 3.0 doesn't just benefit stand-alone compatible RBI boilers; it is a valuable and cost-saving tool in operating a multi-boiler Master/Member network of up to 16 boilers. By functioning as a boiler management system, HeatNet 3.0 can incorporate a mixture of condensing boilers and non-condensing boilers to eliminate costly third-party, wall-mounted boiler control platforms.

- Digital Touchscreen Programming
- Lead/Lag Cascade (16 units)
- Adaptive Modulation
- Circular Pump/VFD/Valve Control
- BMS Integration
- Freeze Protection & Delta T Monitoring
- Hybrid/Base Load Capability
- Priority Boiler Control
- Domestic Hot Water Communication
- Web-based Remote Monitoring/Dashboard
- Diagnostics and Troubleshooting

HEATNET ONLINE

A secure web-based remote monitoring control platform, HeatNet Online continuously monitors, records and graphs input and output trending data for quick visualization of overall boiler system performance. HeatNet Online allows users to see live system performance 24/7/365 to insure peak efficiency while preventing costly failures by allowing proactive responses to systems potentially operating in unsafe conditions. Users can see system performance including but not limited to temperature settings, system cycles and overall boiler performance.

Save Money:

Running your boiler system at peak efficiency is not only important to your organization but it is critical for the environment. By having an easy to understand remote monitoring platform you can pinpoint problems and resolve issues quickly saving time and money while preventing critical system failures resulting in decreased downtime and premium performance.

Alerts & Security:

Custom email alerts are sent to pertinent personnel including the boiler applications team at Advanced Thermal Hydraulics to aid in technical assistance when necessary.

HeatNet Online is a secure system using either a wired network or a wireless cellular network. Outbound data only is transmitted through HeatNet Online eliminating security risks. The team at Advanced Thermal Hydraulics is available for consultation regarding any security questions to insure all of your IT department's policies and procedures stay protected.

- 24/7/365 online boiler system monitoring
- Customized email notification
- Prevent boiler system failure/down time
- Increase boiler performance
- Remote access from any mobile device
- Secure outbound only data transmission
- Wired or wireless cellular network capable
- Communication with any operating system (IOS/Android/Windows)

Futura III

500–1,999 MBH | 4:1 Modulation

Futura III, a near-condensing boiler and water heater, features full modulation with 4:1 turndown while supplying the precise amount of heat necessary to maintain desired building temperature by matching heating demand without overfiring or wasting energy.

These dependable, easy-to-service boilers feature rugged construction and sleek, stainless steel jacket design. With models ranging from 500-1999 MBH, all Futura III units come equipped with HeatNet 3.0 boiler control software, ensuring the highest operating efficiencies of any domestic boiler and hydronic heating system on the market.

- 88% Maximum Efficiency
- Full Modulation with 4:1 Turndown
- Cast Iron Headers (Boilers)
- Bronze Headers (Water Heaters)
- HeatNet 3.0 Integrated Boiler Management System
- Finned Copper Tube Heat Exchanger
- Symmetrically Air/Fueled Coupled
- Gasketless Heat Exchanger Assembly
- Stainless Steel Jacket Panel
- Category I*, II and IV Venting

*Sizes 750 – 2000

Futera II

500–1,950 MBH | On/Off or 2-Stage

Futera II Series hot water supply boilers provide dependable performance with 85% efficiency levels, alongside industry-leading NOx levels of less than 10 ppm. With sizing that ranges from 500 to 1,950 MBH, the Futera II provides a high concentration of BTUs in a small footprint, making it an excellent choice for jobs where mechanical space is limited, as well as other modular, step-fired boiler applications.

The Futera II's compact, low maintenance boiler and venting flexibility allow for easy installation and service, making it the ideal unit for any hot water supply application. Futera II units have the ability to use room air for combustion and are also capable of drawing in air from the outside for sealed combustion. Units can be set up to vent vertically as Category I appliances or horizontally as Category III through a side-wall, making the Futera II ideal for buildings without chimneys, where roof penetrations cannot exist or on electric-to-gas conversions.

- Up to 85% Efficiency
- Advanced Diagnostic Panel
- Cast Iron Headers (Boilers)
- Bronze Headers (Water Heaters)
- Flame Safeguard Control
- One-Piece Header Design
- Stainless Combustion Chamber
- Vertical or Horizontal Venting Options
- 2-Stage Digital Operator
- Galvalume Metal Jacket (Indoor/Outdoor)

Dominator

300–2,100 MBH | 2-Stage/4-Stage

With sizing from 300 to 2,100 MBH, the Dominator offers the ultimate flexibility in boiler and water heater application, all at a competitive price. Capable of operating using mechanical room air for combustion or by drawing outside air directly, the Dominator can vent combustion gases vertically or horizontally with factory equipped draft-inducer kits.

In applications where mechanical space is limited, the Dominator's stackable frame option allows units to be stacked two-high, adding valuable BTUs while keeping the footprint to the size of a single unit. In addition, the Dominator provides up to four stages of firing, allowing the boiler to match the heating load more closely.

And with built-in serviceability features, including a slide out heat exchanger, contractors no longer need to remove the heat exchanger for service or repair, which, when coupled with high efficiencies, makes the Dominator a cost-saving option for any boiler application.

- 2 or 4-Stage Firing Modes (300 On/Off Only)
- Glass Lined Headers
- Optional Bronze Headers
- Galvalume Metal Jacket (Indoor/Outdoor)
- Finned Copper Tube Heat Exchanger – Two-Pass
- Stackable Frame (Seismic Approval up to Zone 4)
- Direct Vent (up to 35' Equivalent)
- Category I & III Venting

Spectrum

100-399 MBH | On/Off or 2-Stage

Spectrum Series boilers and hot water heaters offer some of the highest thermal efficiencies possible in a non-condensing unit. With models ranging from 100 to 399 MBH, Spectrum's unique design and Galvalume metal jacket panels make them ideal for indoor and outdoor installations in corrosive or harsh environments.

A unique feature within this MBH range, the Spectrum Series' diagnostic control panel allows for easy troubleshooting, and, when coupled with the self-diagnostic light package, makes the Spectrum Series easy to assess, maintain and service. All Spectrum Series gas-fired boilers and hot water heaters are constructed for application flexibility, and feature built-in draft diverters to lower the height of the unit and reduce installation costs.

- Glass Lined Headers
- Optional Bronze Headers
- Automatic Reset High Limit 100-200
- Manual Reset High Limit 250-400
- Built-in Draft Diverter
- Stainless Steel Burners
- Inlet & Outlet Thermometers
- Mounted and Wired Flow Switch
- Vent Damper (100-250 MBH Boilers Only)
- Self-Diagnostic Light Package
- Pump Control
- Electronic Ignition
- Galvalume Metal Jacket (Indoor/Outdoor)

LCD Dominator

400–2,300 MBH | On/Off or 2-Stage

The LCD Dominator Series offers a budget-conscious, near-condensing, indoor/outdoor boiler and water heating unit that meets low NO_x requirements, while maintaining superior performance and serviceability that RBI is known for. The LCD provides dependable performance in a wide range of rugged environments and process applications with a wide 400 to 2,300 MBH range.

At the heart of the unit is a sealed combustion chamber that provides the flexibility of using outside or mechanical room air for combustion. Priced in line with other atmospheric boilers, the LCD features smaller vent sizes, resulting in lower installation and operation costs.

The LCD features a robust, compact design that is constructed with high-quality materials, which, when paired with a proven pilot ignition system and a wide variety of venting options, makes this unit one of the most dependable boilers in the commercial boiler market.

- Finned Copper Tube Heat Exchanger
- On/Off, All Sizes 2-Stage, 600–2,300
- Glass Lined Headers
- Galvalume Metal Jacket (Indoor/Outdoor)
- Optional Bronze Headers
- Category I Vertical Venting
- Category III Thru-Wall Venting (up to 35')
- Slide-Out Heat Exchanger
- Stackable Frame (Seismic Approval up to Zone 4)

NON-CONDENSING BOILERS

As boiler systems go, non-condensing engineering is a tried and true design. RBI's selection of high efficiency non-condensing boilers and water heaters run the gamut when it comes to cost savings, easy boiler installation and increased energy savings. And because they're backed by RBI, you can be sure that any non-condensing boiler system you install is built tough and built to last.

STORAGE TANKS

RBI storage tanks are designed to provide large volume, continuous or intermittent hot water supply while maintaining a constant outlet temperature. Ranging in size from standard 200 to 1,000 gallon capacities to custom-built 3,000-gallon units, RBI hot water storage tanks offer complete application flexibility and are the perfect complement to RBI's high efficiency boilers and water heaters.

Available in both jacket/insulated and bare configurations, all RBI hot water storage tanks are ASME certified and use the latest advancements in interior tank lining technology for maximum performance and durability. RBI's signature glass lining is specifically formulated for hot water applications and provides an ultra-durable, wear-resistant lining that minimizes the effects of high temperatures associated with water heating.

- ASME Certified HLW Stamp
- 2" True Dielectric NPT Fittings
- 125 PSI Certified Working Pressure
- Magnesium Anode Rods
- Heavy Gauge Steel Construction
- 2" Non-CFC Foam Insulation
- Durable Heavy Gauge Steel Jacket
- 5-Year/10-Year Warranty (Double Glass Lining Only)
