Warm

Featuring the Patented TracRite controlled Circulation System

TEMPRITE® INDUSTRIES

CMA Direct Fired Gas Heating System Technical Guide

TEMPRITE® INDUSTRIES

In the business of commercial and industrial operations, efficient and low-cost heating is essential. Temprite keeps you warm for less.

Since 1963, Temprite has been providing cost-effective, reliable gas heating solutions. Our proven Direct Fired Gas Heating System adds warm, fresh and clean air to your work environment for greater comfort and productivity.

This Technical Guide will help you choose a Temprite Direct Fired Gas Heating System to provide efficient, cost-effective heating for your kitchen, warehouse, factory or process operation. The Guide covers:

- Technical Specifications — Configure the right system components (e.g., burner, motors, drive, filter, options, etc.) to meet your needs.
- Installation Information — Plan details of on-site installation with dimensional information, unit weights and cabinet arrangement diagrams.

If you have questions, please contact Temprite's Customer Service Department at 214-638-6010. We'll be glad to help.

NSA = No Selection Available

NOTE:
Horsepower selections are based on system total static pressure. One or more of the following must be added when applicable. See pressure drops on page 6 for burner section and optional inlet hood and V-bank sections.

A. Fresh Air Inlet Hood & Birdscreen — W.C.

B. Fresh Air Inlet Hood with Filters — W.C.

C. V-Bank Filter Section — W.C.

D. Burner Section — W.C.

SELECTION GUIDE

1. Determine the required amount of replacement air (CFM) by computing the total amount of air being exhausted. (Restaurants should be sized for 90% of exhaust air to minimize food odors.)
2. Determine the total external static pressure by adding the pressure drops through all accessories and ducts.
3. Select unit size and motor horsepower from table.

SELECTION GUIDE

1. Determine the temperature rise required through the heater by subtracting the winter design temperature from the desired indoor temperature.
2. Values shown in above MBH Input Table are based on -40° F Inlet Temperature. MBH input shown on unit rating plate will be corrected for actual air density.
3. Natural gas units are limited to 130° F temperature rise, propane units are limited to 100° F temperature rise.

MDT Touch Control System

C000775

Application:	Includes:
Modulating Discharge Temperature Control with Equipment Touch Touchscreen controller allowing after hours unit enable, discharge setpoint adjustment, operating feedback, monitoring of alarm status and digital temperature readout.	Discharge air sensor ⑤ mounted in unit discharge with remote mounted Equipment Touch Touchscreen controller ⑥ to set discharge temp, operating schedules, and optional damper control setpoints. Service information, operating feedback and alarm status can also be monitored.

COMPONENT I.D.

1. Unit DDC Controller
2. Signal Conditioner
3. Modulating Gas Valve
4. Inlet Air Sensor
5. Discharge Air Sensor
6. Equipment Touch Touchscreen Interface

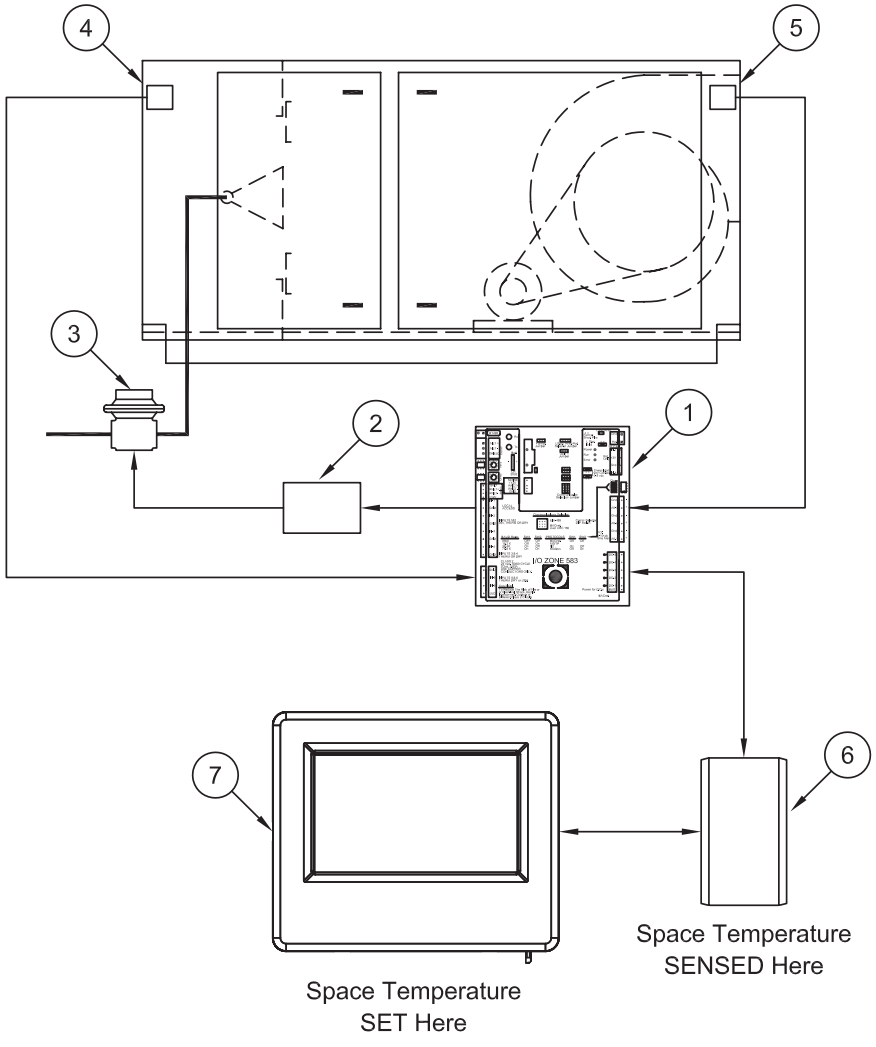
C000774

Application:	Includes:
Modulating Room Temperature Control with Equipment Touch Touchscreen controller allowing after hours unit enable, room setpoint adjustment, operating feedback, monitoring of alarm status and digital temperature readout with ZS-Standard room sensor.	Discharge air sensor ⑤ mounted in unit discharge with remote mounted Equipment Touch Touchscreen controller ⑦ to set space temp, operating schedules, and optional damper control setpoints. Service information, operating feedback and alarm status can also be monitored. Also includes a ZS-Standard room sensor ⑥.

COMPONENT I.D.

1. Unit DDC Controller
2. Signal Conditioner
3. Modulating Gas Valve
4. Inlet Air Sensor
5. Discharge Air Sensor
6. Room Thermostat
7. Equipment Touch Touchscreen Interface



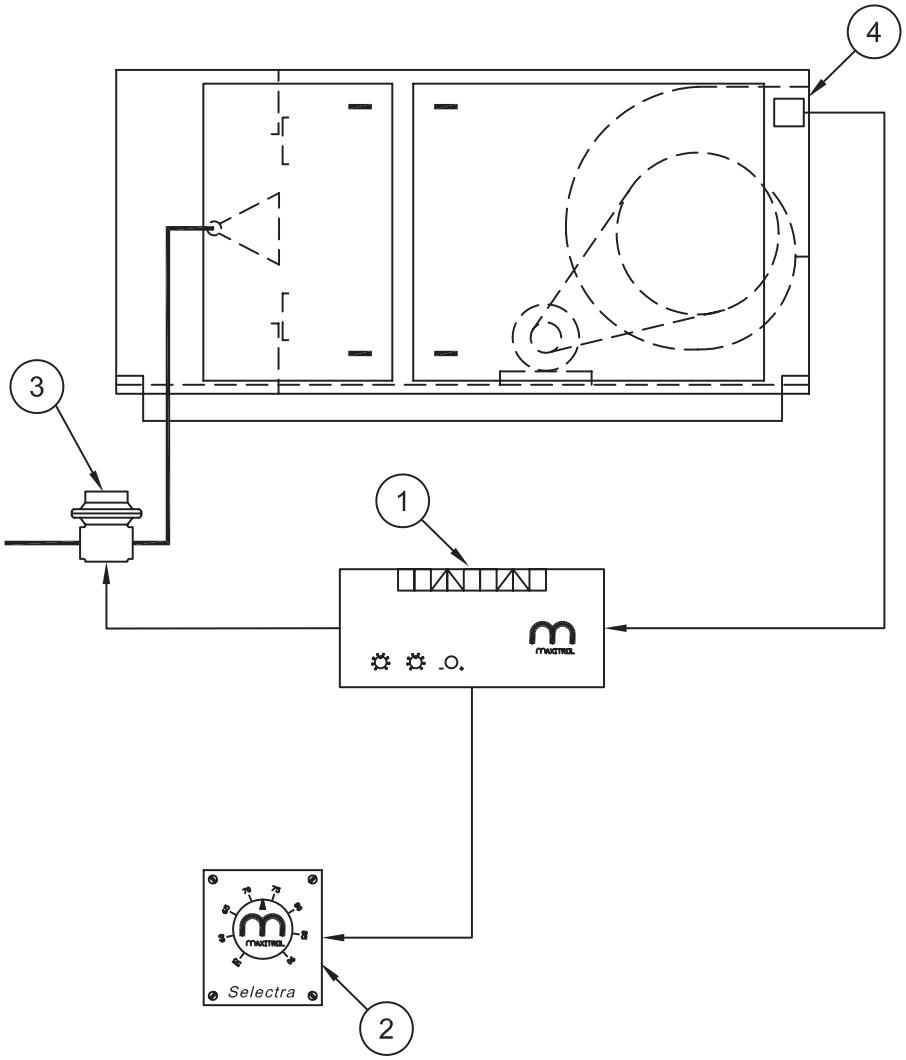
System 14

C000779

Application:	Includes:
Non-DDC Modulating Discharge Temperature Control	System 14 Amplifier ① compares signals from Discharge Air Sensor ④ mounted in unit discharge and Remote Temperature Selector ② mounted in space. Modulating Gas Valve ③ receives signal from amplifier and adjusts gas pressure to maintain constant discharge air temperature.

COMPONENT I.D.

1. Amplifier (System14)
2. Remote Temperature Selector
3. Modulating Gas Valve
4. Discharge Air Sensor



Discharge Temperature
SET Here

System 44

C000780

Application:	Includes:
Non-DDC Modulating Room Temperature Control	System 44 Amplifier ① compares signals from Discharge Air Sensor ④ mounted in unit discharge and Remote Room Thermostat ② mounted in space and sends signal to Modulating Gas Valve ③ to adjust gas pressure for desired space temperature while maintaining preset minimum and maximum discharge air temperature settings.

COMPONENT I.D.

1. Amplifier (System44)
2. Room Thermostat
3. Modulating Gas Valve
4. Discharge Air Sensor

		7-1/2	10	15	20
Blower Motor	208V 3 PH	24.2	30.8	46.2	59.4
	230V 3 PH	22.0	28.8	42.0	54.0
	460V 3PH	11.0	14.4	21.0	27.0
	575V 3 PH	9.0	11.5	17.0	22.0

Item B

SOURCE	AMPS	ALL SIZES
Controls	Allow 2 Amps Maximum	

NOTES: 1) NA = Not Available

2) Motor amps are based on 2011 edition of NEC.

Steps to Size Optional Disconnect Switch:

1. Find Blower Motor HP from tables on pages 4 -5.
2. Find amp draw for Blower Motor HP from chart in Item A above.
3. Add 2 amps for Controls from Item B above.
4. Add amps from steps 2, and 3, then multipy by 1.25.

Pre-Purge Timing

The standard unit is provided with a 10 second pre-purge timer which is good for all rooftop units without inlet duct work. If inlet duct is attached to heater, ANSI requirements stipulate that the inlet duct must be purged four times prior to trial for ignition. to calculate the maximum allowable inlet duct lenth, use:

Maximum Inlet Duct Length (feet) = Inlet Duct Velocity (FPM) / 24

Guide Specification – Base Unit

Base Bid Temprite Model CMA _____ make-up air unit(s) designed for outdoor application. The unit discharge shall be designed for easy adaptation to external ductwork or optional accessories. The unit(s) shall be capable of delivering _____SCFM at _____TSP using a _____horsepower (ODP) (TEFC) motor operating on (115/1/60)(230/1/60) (208/3/60) (230/3/60) (460/3/60)(575/3/60).

BURNER SECTION
The line burner shall be capable of delivering _____BTUH firing on (natural gas)(propane) at an inlet pressure of _____(inches water column) (PSIG). The standard ETL listed unit will meet ANSI, FM, and IRI requirements. Both burner and blower shall be compensated for an altitude of _____ feet above sea level. Manifold to be located outside of air stream and shielded from atmospheric conditions by means of a protective compartment with hinged access. An observation port shall be located to provide view of main flame.

Unit(s) shall be supplied with wide range burner with a modulating turndown ratio of 25:1. Adjustable profile plates shall be provided and sized to maintain the required velocity across the line burner. The operation of the burner shall be programmed through the ignition controller with timed prepurge and flame sensed by means of a flame rod.

The burner assembly and gas manifold shall be completely prepiped and factory tested prior to shipment.

The unit shall be controlled by:
(One of Three options, Choose one)

Option 1
TracRite DDC control module with full BACnet compatibility. Unit shall have the TracRite (pick one):

1. **MDT-Touch Modulating Discharge Temperature Control System.**
2. **MRT-Touch Modulating Room Temperature Control System.**

The TracRite DDC control system shall include but not be limited to the following controls required for standard operation:

- Electronic time clock with normal, holiday, and override schedules.
- Timed freeze protection to prevent heater from discharging unheated air into the building.
- Inlet On-Off sensor which will turn burner off when inlet temperature equals desired discharge air temperature as fuel savings mode.
- On-Off night setback thermostat for lower operating temperatures in unoccupied mode as fuel savings mode.

Option 2
System 14 Discharge Temperature Control. The System 14 control system shall include but not be limited to the following controls required for standard operation:

- Amplifier mounted in electrical control panel with sensitivity adjustments and one (1) calibrating potentiometer.
- Remote temperature selector mounted on optional Remote Control Panel and can be installed in any convenient location for remote adjustment of leaving air temperature between 55° to 90°F.
- Timed freeze protection to prevent heater from discharging unheated air into the building.
- Modulator/Regulator valve mounted in gas piping manifold that receives electrical signal from amplifier and adjusts gas pressure to maintain desired leaving air temperature.

Option 3
System 44 Room Temperature Control. The System 44 control system shall include but not be limited to the following controls required for standard operation:

- Amplifier mounted in electrical control panel contains adjustments for maximum and minimum discharge air temperature, three (3) calibrating potentiometers and a sensitivity adjustment.
- Remote temperature Selectrastat mounted on optional Remote Control Panel and installed in heated area for adjustment of room temperature between 55° to 90°F.
- Timed freeze protection to prevent heater from discharging unheated air into the building.
- Modulator/Regulator valve mounted in gas piping manifold that receives electrical signal from amplifier and adjusts gas pressure to maintain desired room air temperature.

UNIT CASING
Unit casing and accessories shall be fabricated from heavy-gauge galvanized steel panels and extruded aluminum frame. The base of the unit shall be formed of heavy-gauge galvanized steel with built in curb adapter (horizontal units only). All casings shall be airtight and weatherproof. Roof panels shall be convex to prevent ponding, and designed with a standing seam to prevent water entrainment. Cabinet shall be designed with roof eaves to prevent water from getting into wall panels. Complete access shall be provided to all components through gasketed, hinged access doors. This includes the motor, blower, burner, electrical components and manifold sections.

Guide Specification – Base Unit (con't)

BLOWER SECTION
Each unit shall be supplied with centrifugal forward curve, DWDI fan rated in accordance with AMCA standards. The fan shall be mounted on a heavy-duty polished steel shaft designed for a maximum operating speed not to exceed 75% of its first critical speed. Bearings are to be heavy-duty industrial prelubricated type. Blowers to be driven by a V-belt package sized with a capacity of 25% greater than the motor horsepower. Multiple belt applications will be matched sets. Drives are to be (fixed) (adjustable). Motor to be mounted on adjustable base. Door safety interlock switch shall be provided for protection when blower access door is opened.

CONTROL ENCLOSURE
The unit(s) shall be supplied with a control compartment and all controls mounted within this compartment are to be wired to a numbered terminal strip. All wiring is to be color coded in accordance with the NEC. A circuit diagram is to be laminated to the inside of the control cabinet door. All electrical components shall bear a recognized label.

CONTROLS
1. Main fan starter and overloads
2. Control circuit fusing
3. High temperature limit switch
4. Flame rod sensor
5. Ignition module
6. Main gas automatic shutoff valves
7. Air proving differential switches
8. Factory wired motorized inlet damper complete with end switch
9. Control transformer
10. Remote control panel with DDC controls

OPTIONAL EQUIPMENT
1. V-Bank filter box with 1" or 2" filters
2. Inlet hood and birdscreen with or without filters
3. Insulation
4. Full perimeter roof curb (horizontal units only)
5. Vibration hangers
6. Clogged filter indication
7. Disconnect switch
8. 20 gauge liners
9. High gas pressure regulator (required for inlet pressure over 1/2 PSIG)
10. Vertical arrangement with support stand and birdscreen
11. Mixing dampers with return air flow station
12. Internal blower/motor isolation (horizontal units only)
13. Discharge nozzles
14. Firestat
15. 115 Volt service receptacle
16. High/low gas pressure switch
17. Fixed or revolving discharge
18. Electronic time clock (Not Available with Touch DDC Control Systems)
19. On-off night setback thermostat (Not Available with Touch DDC Control Systems)
20. NEMA 1 or NEMA 12 remote control panel (System 14 or System 44 controls only)
21. VFD controller
22. Exhaust interlock
23. Interlocking relay

Guide Specification – Mixing Dampers With Return Air Flow Station

Unit(s) shall have outside air and return air dampers with modulating actuator controlled by TracRite DDC control system (Patent #7,059,536). The TracRite DDC control system shall have capability to digitally control the outside air quantity from a nominal minimum of 20% to 100% with integrated gas valve control at all room concentrations of CO2.

The return air inlet shall include a self-calibrating flow measuring station with a grid of velocity pressure probes with spacing no greater than 12" over the entire face of the return air opening and sampled every second. Samples are averaged to provide smooth, accurate data that is delivered to the TracRite DDC control system every second. The DDC control system shall be capable of electronically displaying the return air/outside air ratio within 5% accuracy at all damper positions.

The TracRite DDC control system shall be capable of controlling mixing dampers in: (Choose One)

Manual Mode: The "Manual" mode allows manual positioning of the outside air (O.A.) damper and return air (R.A.) damper by changing the damper position setpoint.

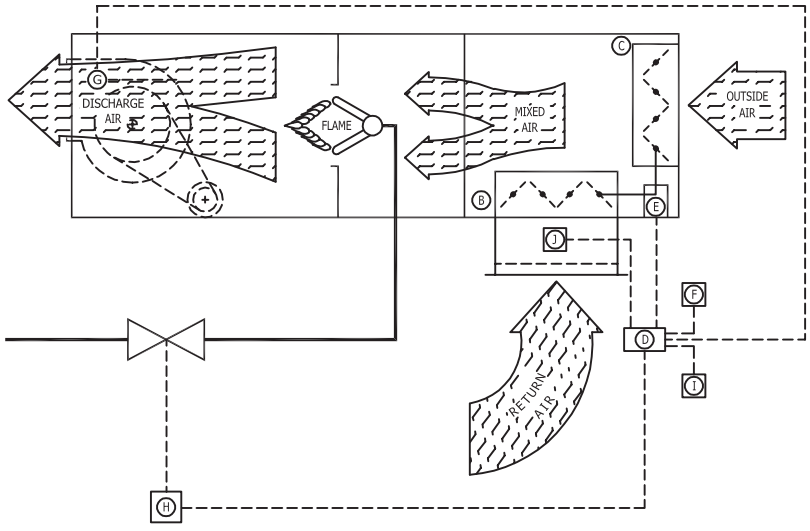
Mixed Air Temperature Mode: The "Mixed Air Temperature" mode shall provide automatic control of the mixed air temperature by modulating the outside air (O.A.) damper and return air (R.A.) damper to maintain the mixed air temperature setpoint.

Building Pressure Mode: The "Building Pressure" mode shall provide automatic building pressure control by modulating the outside air (O.A.) damper and return air (R.A.) damper to maintain the indoor building pressure setpoint. As the building pressure decreases below the setpoint more outside air will be introduced.

Sequence of Operation – Return Air Units

P000621

OPERATION WITH RETURN AIR UPSTREAM OF BURNER



Signal from remote control I to TracRite Controller D, sets operational parameters for dampers B and C, and burner. Damper operation can be manual, building pressure or mixed air temperature.

Return air dampers B, and outside air dampers C, are interlocked to move together. As one opens, the other closes. As the return air dampers open, allowing more return air to enter the unit, the outside air dampers move toward the closed position, decreasing the amount of outside air. Pressure sensor and flow station J, senses change in return airflow and signals TracRite Controller D.

Modulating gas valve H, regulates gas supply in response to signal from TracRite Controller D. TracRite Controller D, varies signal based on input from room temperature sensor F, discharge temperature sensor G, and airflow sensor J. Gas valve H can provide approximately 4% to 100% of rated burner capacity.

Guide Specification – Touchscreen Controller

The display functions of the remote touchscreen display for the TracRite DDC control system shall include but not be limited to the following:

- Return air temperature
- Outside air temperature
- Discharge air temperature
- Mixed air temperature
- Maximum allowable temperature rise
- Actual temperature rise
- Current percent of outside air
- Current building pressure (optional)
- Current damper input voltage (optional)
- Current burner input voltage
- Fan operating hours since last reset
- Fan start cycle count since last reset
- Burner operating hours since last reset
- Burner start cycle count since last reset
- Cooling interlock operating hours since last reset
- Cooling interlock cycle count since last reset
- Critical alarm conditions:
  - o Airflow switch failure
  - o Unit on, fan off
  - o Unit off, fan on
  - o Low discharge temperature
  - o Safety circuit open
  - o Burner jumped

The control settings available on the remote touchscreen display for the TracRite DDC control system shall include but not be limited to the following:

- Heating setpoint
- Cooling setpoint
- Economizer options
- Setback setpoint
- Freeze protection setpoint
- Maximum discharge air temperature setpoint
- Minimum discharge air temperature setpoint
- Minimum ventilation option and setpoint
- Time of day schedule selection and setpoints
  - o Normal 5/7 schedule
  - o Holiday schedule
  - o Manual override

TEMPRITE®
INDUSTRIES

Efficient Direct Fired Gas Heating System

Choose Temprite Direct Fired Gas Heating

- Heat large or small spaces with 100% combustion efficiency
- Constantly replace contaminated indoor air with fresh, heated outside air
- Optional evaporative cooling
- Low operating and maintenance costs
- Fresh air ventilation anytime — just turn off the gas heating system
- Simple, inexpensive installation
- Temprite, a leader in research, engineering, and customer service since 1963
- Fans tested to AMCA standards to insure rated airflow
