MODEL NUMBER DESCRIPTION	28

Horizontal steam/hot water unit heaters are available in a range of outputs and airflows allowing almost unlimited flexibility in job design.

The following points offer some basic guidelines and suggestions which will be helpful in designing any job using horizontal steam/hot water unit heaters:

- Always direct airflow to areas of greatest heat loss.
- Adjust throw length with horizontal louvers.
- Use horizontal and vertical louvers for complete directional control of airflow.
- Mount units at the lowest practical and allowable level.
- Select lower CFM models for lower mounting heights and heavily occupied areas.
- The higher a unit must be located, the more CFM is required to get the heat down to the occupied zone.
- More, smaller units will provide better heat distribution than fewer larger ones.
- Watch final air temperatures on units mounted at lower levels or in heavily occupied areas to insure that air is warm enough to avoid drafts being felt.
- On motors with variable speed control use lower CFM rating for design base.
- Watch sound ratings.

Application of Unit Heaters

The proper choice and placement of a unit heater with regard to building type (architecturally) and application (area use) are two criteria, the importance of which cannot be overemphasized.

The first step in the design of a job is typically to determine the heat loss before considering CFM, final air temperature and quantity and location of units. ASHRAE and others publish the basic methodology used in calculating the building or area's heat loss.

Two requirements which not only affect the heat loss calculation but every other step of the job as well, are a detailed knowledge of the building's construction and its planned usage. The number of people, types of equipment and daily activities therein should be a strong guiding factor in the overall design.

FIG. A. Typical arrangement of unit heaters in manufacturing plant, showing air flow patterns. Not to scale.

A large square area with exposed walls and roof; units are blanketing all exposed surfaces.

A narrow area with two exposed walls either with or without roof exposure.

A small area with exposed walls requiring one unit.

Horizontal Unit Heaters Construction and Features

MOTORS

115 volt, single speed motors are standard. Most sizes can be supplied with single phase, explosion proof motors. For standard motors in 230 volt or three-phase configuration, and three-phase explosion-proof motors, see page 13 for availability.

FAN GUARDS

All sizes with standard (non-explosion-proof) single phase 115 or 230 volt motors utilize a wire fan guard as a motor mount. OSHA type fan guards are standard on all serpentine coil models and header type sizes 18 through 48 equipped with single phase, standard motors only. On header type sizes 60 through 360, OSHA type fan guards can be added as an optional accessory when equipped with a single phase, standard motor only. Horizontal unit heaters with OSHA fan guards can be installed in residential applications. All sizes with three-phase or explosion-proof motors are shelf-mounted and standard fan guards can be added as an optional accessory.

HORIZONTAL AND VERTICAL LOUVERS

Horizontal louvers are standard on all sizes. Vertical louvers are an optional accessory on all sizes. Vertical louvers are installed on built to order units or shipped loose for field installation.

THERMOSTATS

Line voltage wall thermostats are in stock for immediate shipment. All models are SPST with bi-metal thermometer, set point adjustment, 40 to 90°F (5 to 30°C) range and selector switches. Standard duty models with “off-auto” and “auto-off-fan” and a heavy duty model with “auto-off-fan” switching are available. Other models available on request.

STRAP-ON WATER CONTROL

A SPDT strap-on type hot water control with 100° to 240°F (38 to 116°C) rated at 10 amps at 120 volt is also available. Control can be used for direct or reverse acting applications as a high or low limit.

STEAM PRESSURE CONTROL

SPST switch opens on a rise in pressure. Control is automatically reset, has a range of 0 to 15 PSIG (0 to 103 KPa) and has an adjustable differential. **Other actions, ranges, circuits and manual reset models are available on request.**

Figure 1

Figure 2

MANUAL STARTERS

Single and three-phase models are available. Standard models are single-speed, toggle-operated, NEMA Type 1 and are surface-mounted. **Note: While these manual starters can be used with explosion-proof motors, they do not meet requirements for use in explosion-proof applications.**

WALL MOUNTED SPEED CONTROLLERS

Horizontal units up to size 108 and vertical units up to size 104 with standard motors (115 volt) can be operated at reduced speeds by addition of optional speed controller. Controller is 5 amps, pre-set at factory for maximum and minimum speeds, with intermediate speeds infinitely controllable.

All 1/3, 1/2 HP and 230 volt motors operate only at rated speed and CFM – See performance data charts.

Horizontal Unit Heaters

* For the lower output, an optional Speed Controller must be ordered.

For Sound Ratings See Pages 6 & 8.

** For further information see page 11, COIL SIZES.

† Stated AMP is full load amps (FLA). AMP draw varies by motor manufacturer ± .2 AMPS. See page 13 for motor data.

‡ Motor HP listed is applicable to standard motor type only. For explosion proof motor HP, see unit installation manual.

Horizontal Unit Heaters Steam Calculations and Correction Factors

EXAMPLE: –
 UNIT SIZE: _____ 24
 Steam Pressure _____ 10 PSI
 Entering Air Temp. _____ 40°F

I. CAPACITY		
A. For 2 LBS steam, 60°F Entering air	Read output directly from Table 1, 24,000 BTU/HR (Ref., Std. Unit Size 24)	
B. For higher steam pressures and/or EAT's above or below 60°F	Multiply output from Table 1 by appropriate correction factor from Table 2 (below)	24,000 x 1.29 = 30,960 BTU/HR
II. FINAL AIR TEMPERATURE		
A. For 2 LBS steam, 60°F Entering air	Read temperature directly from Table 1, 109°F (Ref., Std. Unit Size 24)	
B. For capacities calculated in IB (above)	$\frac{\text{Output from IB}}{1.085 \times \text{CFM from Table 1}} + \text{EAT} = \text{Final Air Temperature}$	$\frac{30,960}{1.085 \times 450} + 40 = 103.4^\circ\text{F}$
III. FINAL AIR VOLUME		
A. For 2 LBS steam, 60°F Entering air	$\frac{460 + \text{Final Air Temp from Table 1}}{530} \times \text{Nom. CFM from Table 1} = \text{Final Air Volume}$	$\frac{460 + 109}{530} \times 450 = 483 \text{ CFM}$
B. For final air temperatures calculated in IIB (above)	$\frac{460 + \text{Final Air Temp from IIB}}{530} \times \text{Nom. CFM from Table 1} = \text{Final Air Volume}$	$\frac{460 + 103.4}{530} \times 450 = 478 \text{ CFM}$
IV. CONDENSATE PER HOUR		
A. For 2 LBS steam, 60°F Entering air	Read LBS per hour from Table 1, 24.5 LBS/HR (Ref., Std. Unit Size 24)	
B. For capacities calculated in IB (above)	$\frac{\text{Output from IB}}{\text{Latent Heat From Table 3}} = \text{LBS per hour of condensate}$	$\frac{30,960}{953} = 32.5 \text{ LBS/HR}$

For Fan Diameter See Page 4.

**Stated AMP is full load amps (FLA). AMP draw varies by motor manufacturer ± .2 AMPS. See page 13 for motor data.

† Motor HP listed is applicable to standard motor type only. For explosion proof motor HP, see unit installation manual.

Horizontal Unit Heaters Hot Water Calculations and Correction Factors

EXAMPLE: –

UNIT SIZE: _____ 24
 Entering Water Temperature _____ 160°F
 Entering Air Temperature _____ 40°F
 Water Temperature Drop _____ 10°F

I. CAPACITY @ 20°F TD: A. For 200°F EWT, 60°F EAT	Read output directly from Table 4, 17,400 BTU/HR (Ref., Std. Unit Size 24)	
B. For EWT and/or EAT above or below Standard	Multiply output from Table 4 by factor from Table 5 (below)	17,400 x .878 = 15,277 BTU/HR
II. CAPACITY AT OTHER TD's A. For TD's from 5 to 60°F	Multiply output obtained in IA or IB (above) by appropriate factor from Table 6 (below)	IA - 17,400 x 1.15 = 20,010 BTU/HR – OR – IB - 15,277 x 1.15 = 17,569 BTU/HR
III. GPM AT OTHER TD's A. For TD's from 5 to 60°F	Multiply GPM of unit for 20°F TD, from Table 4 by appropriate factor from Table 6 (below)	1.8 x 2.30 = 4.14 GPM (Applies only to units with Std. 200°F EWT, 60°F EAT) For all others calculate using formula – $GPM = \frac{BTU}{500 \times TD}$
IV. CAPACITY AT OTHER RATES OF WATER FLOW	Multiply output from Table 4 by factor from Table 8 (below)	
V. PRESSURE LOSS AT OTHER TD's A. For TD's from 5 to 60°F	Multiply PD of unit for 20°F TD, from Table 4 by appropriate factor from Table 6 (below)	.014 x 5.00 = .07 Ft. H ₂ O

Horizontal Unit Heaters Technical Data

The performance data listed on page 6 includes sound ratings. The ratings provide a guide in determining the acceptable degree of loudness in particular occupancy situations.

Certain general rules apply to specific selection of unit heaters with regard to degree of quietness (or loudness);

- The greater the fan diameter, the higher the sound level.
- The higher the motor RPM, the higher the sound level. Note that on most units the lower the speed mode results in lowering the sound rating one increment.
- Selecting a larger number of smaller units generally results in lower overall noise levels than fewer large units.

All horizontal steam and hot water unit heater motors, whether fan guard or shelf-mounted, are isolated from the mechanical mount by resilient isolators. This mounting along with balanced fan blades and excellent overall construction integrity, assures you the utmost in quiet operation.

The following table outlines sound ratings for various applications. The lower the number, the quieter the unit and the lower the sound requirement.

CATEGORY OF AREA	SOUND RATING
Apartment, assembly hall, classrooms churches, courtrooms, executive offices, hospitals, libraries, museums, theatres.	I
Dining rooms, general offices, recreation areas, small retail stores.	II
Restaurants, banks, cafeterias, department stores, public buildings, service stations.	III
Gymnasiums, health clubs, laundromats, supermarkets.	IV
Garages, small machine shops, light manufacturing.	V
Factories, foundries, steel mills.	III - VII*

*Depending on specific use in these facilities, size of operation, etc.

CORRECTIONS WHEN USING GLYCOL SOLUTION IN SYSTEM

	Propylene Glycol	Propylene Glycol
1. Heat transfer @180°F with no increase in flow rate	20% solution .97* 50% solution .90*	7. Freezing Point 55% by volume - 50% -28°F 40% -13°F 30% + 4°F 20% +17°F
2. GPM Req'd. @180°F, 20° Δ t (no correction to pump curve)	1.10%*	
3. Pump Head Req'd. @180°F w/increase in GPM	1.23%*	
4. Specify gravity (water = 1.0)	1.045-1.055*	
5. Pounds/Gallons @60°F (water = 8.3453 Pound/Gallon)	8.77	
6. pH @ 50% by volume	9.5	

*Compared to water.

Approximate factors at varying altitudes	
Altitude	Factor
Sea level - 1000 feet	1.00
1000 feet - 3000 feet	.958
3000 feet - 5000 feet	.929
5000 feet - 7000 feet	.900
7000 feet - 10000 feet	.871

Horizontal Unit Heaters

Mounting Heights and Throws — Table 9

Unit Size	Maximum Mounting Height	Approximate Maximum Throw	Unit Size	Maximum Mounting Height	Approximate Maximum Throw
108A	8'	20'	108	11'	40'
118A	8'	25'	120	12'	40'
125A	9'	29'	132	13'	54'
136A	9'	29'	144	13'	55'
18	8'	20'	156	13'	55'
24	8'	24'	180	13'	53'
36	9'	28'	204	13'	55'
48	9'	30'	240	14'	57'
60	10'	30'	280	14'	57'
72	10'	29'	300	15'	58'
84	10'	30'	360	15'	60'
96	11'	38'			

This table is based on 60°F entering air and either 2 Lbs steam or 200°F water with a 20°F TD. The data is based on the higher speed CFM throughout and velocity. Care should be exercised in locating adjacent unit heaters and allowance should be made for obstructions in the air pattern and conflicting air currents from other air moving devices.

* Applies to standard motor with standard fan guard. When optional motors or OSHA fan guards are requested, dimensions will vary according to the substitutions made.

- NOTES:
1. OSHA guard standard on all serpentine models and header models 18 thru 48 supplied with 1 phase motors (dimensions shown in tables).
 2. Standard motor and standard guard shown.
 3. All 3 phase and explosion proof motors are shelf mounted.
 4. Optional OSHA guards available for all units with standard 1 phase motor.

Horizontal Unit Heaters Specifications

GENERAL

Furnish and install, where indicated or scheduled on plans the horizontal steam/hot water unit heater. Unit shall be equipped as specified herein. All units shall be installed in a neat and workmanlike manner in accordance with this specification and the manufacturer's installation instruction.

CASING

Casings shall be 20-gauge die-formed steel. Paint finish shall be of lead-free, chromate free, polyester melamine resin base. Finish shall be baked at 400°F.

COIL SIZES 18 – 360

Coil elements and headers shall be of heavy wall drawn seamless copper tubing. Element tubes shall be brazed into extruded header junctions. Pipe connection saddles shall be of cast bronze. Aluminum fins shall have drawn collars to assure permanent bond with expanded element tubes and exact spacing. All Element Assemblies are submersion tested at the factory at 200 PSI. Under maximum conditions, coils are rated at 150 PSI at 366°F for steam and 150 PSI at 320°F for hot water. We recommend operating pressure of 75 PSI at 320°F for long life.

MOTORS

Motors shall be totally enclosed, resilient mounted with class "B" windings. All motors shall be designed for horizontal mounting. Motors under 1/3 HP are totally enclosed, frame mounted, 115/1/60 with thermal overload protection and permanently lubricated sleeve bearings with optional solid state speed controller available. 1/3 HP (115/1/60) motors are open frame construction, with thermal overload protection and ball bearings. 1/3 HP at (230 volt) and 1/2 HP (230 volt) motors are open frame construction, with thermal overload protection and ball bearings. 1/3 and 1/2 HP motors are available in single and 3 phase in open frame construction or explosion-proof housings, all the above are available as options.

EXPLOSION PROOF MOTORS

An enclosed motor whose enclosure is designed and constructed to withstand an explosion of a specific gas or vapor which may occur within the motor and to prevent the ignition of this gas or vapor surrounding the machine.

Horizontal unit heater motors comply with the National Electrical Code classification as follows:

- Class I, Group D; all sizes
- Class II, Group F; all sizes
- Class II, Group G; all sizes
- Division I & II Installations
- T-code (T3B)

Explosion proof equipment is not generally available for Class I, Groups A and B and it is necessary to isolate motors from the hazardous area. All explosion proof motors are shelf mounted.

FANS

Fans shall be of the aluminum blade, hub type designed and balanced to assure maximum air delivery, low motor horsepower requirements and quiet operation. Blades are spark proof.

FAN GUARDS

Fan guards shall be welded steel, zinc plated or painted. To meet ETL and OSHA requirements, units mounted below 8 feet from floor must be equipped with an OSHA fan guard. OSHA fan guards are standard on coil sizes 18 through 48 and optional on coil sizes 60 through 360 with single phase, standard motors only.

AIR DEFLECTION LOUVERS

Units shall be equipped with horizontal, individually adjustable louvers. Vertical louvers for four-way air control shall be available as an optional extra.

Serpentine Coil Horizontal Unit Heaters

Dimensional Data

Figure 5

NOTE: Motors are totally enclosed, thermally protected, sleeve bearing, with 2" (h) x 4" (w) conduit connection boxes. Nutserts are attached to enclosure for balanced hanging.

Table 11 - STANDARD SPECIFICATION

Unit Size	H inches (mm)	W inches (mm)	A inches (mm)	B inches (mm)	C inches (mm)

125A	5	10 (254)	25 (11.3)
136A*	6	12 (305)	31 (14.0)

* DIMENSION "C" IS TO BACK OF MOTOR, NOT MOTOR CONDUIT CONNECTOR AS SHOWN ABOVE.
NOTE: OSHA type fan guard standard on sizes 108A through 136A.

Serpentine Coil Horizontal Unit Heaters Specifications

GENERAL

Furnish and install, where indicated or scheduled on plans the horizontal hot water unit heater. Unit shall be equipped as specified herein. All units shall be installed in a neat and workmanlike manner in accordance with this specification and the manufacturer's installation instruction.

CASING

Casings shall be 20-gauge die-formed steel. Paint finish shall be of lead-free, chromate free, polyester melamine resin base. Finish shall be baked at 400°F.

COIL SIZES 108A – 136A

Coil is a serpentine design with seamless copper tubing. Aluminum fins shall have drawn collars to assure permanent bond with expanded tubes. Tubing connection shall be 3/8 inch copper tubing, type "M" (.500 OD). Coils shall be factory tested at 200 PSI. Coils have a max operating entering water temperature of 320°F.

MOTORS

Motors shall be totally enclosed, resilient mounted with class "B" windings. All motors shall be designed for horizontal mounting.

FANS

Fans shall be of the aluminum blade type, designed and balanced to assure maximum air delivery, low motor horsepower requirements and quiet operation.

OSHA FAN GUARDS

OSHA fan guards shall be welded steel, zinc plated or painted. OSHA fan guards are standard on all models.

AIR DEFLECTION LOUVERS

Units shall be equipped with horizontal, individually adjustable louvers.

Horizontal Unit Heaters Motor Characteristics

* Optional variable speed switch is available.

**These motors are without thermal overload protection. Motors without thermal overload protection must be installed with the optional manual starter or other field provided overload protection.

NOTE 1: All motors are constant speed and operate at top speed as indicated in motor data. Unit sizes 18 through 108, including 108A, 118A, 125A and 136A can be run at reduced speed with addition of optional variable speed switch. This switch is factory-calibrated for low and high speed ratings, with intermediate speeds infinitely controllable. Unit sizes 120 through 360 operate at constant speed as indicated in motor data. All 1/4 HP motors are PSC.

NOTE 2: Motors under 1/3 HP are totally enclosed, frame mounted, 115/1/60 with thermal overload protection and permanently lubricated sleeve bearings with optional speed controller available. 1/3 HP (115/1/60) motors are open frame constant speed with thermal over-load protection and ball bearings. 1/3 HP (230 volt) and 1/2 HP (230 volt) motors are open frame constant speed with thermal overload protection and ball bearings.

***These motors are 115/230 volts.

†230/1/60 unit has 115/1/60 motor supplied with field installed stepdown transformer.

NOTE 3: 1/3 and 1/2 HP motors are available as 230 volt single and 3 phase in open frame and explosion-proof housings, all available as options. 1/3 and 1/2 HP motors operate at single speed only.

NOTE 4: Stated AMP draw is full load amp (FLA). AMP draw varies by motor manufacturer ± .2 AMPS. Verify FLA per unit motor data plate.

CAUTION: Select appropriate AMP and MCA for the multiple voltage motors. For example, the AMP and MCA for Models 360 with a 460 volt Totally Enclosed motor is 1.3 and 1.6 respectively.

Vertical Unit Heaters Features and General Specifications

Vertical projection unit heaters provide heat where it is required in commercial and industrial applications. Mounted near the ceiling, this unit provides air circulation and reduces stratification, without occupying otherwise usable building space. Units can be provided with an optional diffuser for patterned discharge or without a diffuser for higher velocity 'spot' heating near doorways and other high-loss areas.

Vertical units are available in fifteen sizes for steam or hot water heating. Steam capacities range from 140 to 2,580 EDR (26.0 to 705 MBH) (2 PSI w/60°F EAT). Hot water capacities range from 18.9 to 519.4 MBH (200°F EWT/20°F drop w/60°F EAT).

CONSTRUCTION

The unit casing is formed by two square, 20-gauge steel plates. The bottom plate forms an orifice for air delivery. Air ports are stamped in the top plate of standard units for easy conversion of low output units.

FAN

The aluminum blade fans are quiet, factory balanced and sturdy for standard or sparkproof applications.

OPTIONAL OSHA FAN GUARD, LOUVER CONE DIFFUSER

To meet ETL and OSHA requirements, units mounted below 8 feet (2.4 m) must be equipped with an OSHA Fan Guard. If adjustments to the vertical airflow pattern are desired, the Louver Cone Diffuser can be installed.

Note: Vertical unit heaters can support either OSHA Fan Guard or the Louver Cone Diffuser - **both units cannot be installed on the same unit.**

HEATING ELEMENT

Hot water-steam coils are rectangular 3 or 4-sided, one-pass, multiple circuit, with aluminum fins mechanically bonded to the tubes. Standard coils are seamless copper tubing. Coils tested at 375 PSI under water. Supply and return connections are steel pipe. Standard coils have .025 copper tubing suitable for use on steam pressure to 75 PSI or hot water up to 225 PSI or 325°F.

MOTORS

Standard motors are 115/60/1, totally enclosed, with thermal overload protection for all vertical units through size 285. Standard motors for sizes 40, 62 and 77 are shaded pole, sleeve bearing. The vertical 104 motor is permanent split capacitor type with sleeve bearings. Motor for unit sizes 125 through 285 are permanent split capacitor types with permanently lubricated ball bearings. Motors used on unit sizes 317 through 700 are 230/460/60/3, totally enclosed, with permanently lubricated ball bearings. Unit sizes smaller than 317 are also available with 230/460/60/3 motors.

All motors fractional HP and integral HP, have Class "B" insulation. The 115/60/1 motors used as standard on unit

sizes 40 through 104 can be operated at multiple speeds with the addition of a solid-state control.

All units are available with 1140 RPM explosion-proof motors.

EXPLOSION PROOF MOTORS

An enclosed motor whose enclosure is designed and constructed to withstand an explosion of a specific gas or vapor which may occur within the motor and to prevent the ignition of this gas or vapor surrounding the machine.

Vertical unit heater motors comply with the National Electrical Code classification as follows:

- Class I, Group D; all sizes
- Class II, Group F; all sizes
- Class II, Group G; all sizes
- Division I & II Installations
- T-code (T3B)

Explosion proof equipment is not generally available for Class I, Groups A and B and it is necessary to isolate motors from the hazardous area.

THERMOSTATS

Line voltage wall thermostats are in stock for immediate shipment. All models are SPST with bimetal thermometer, set point adjustment, 40 to 90°F (5 to 30°C) range and selector switches. Standard duty models with "off-auto" and "auto-off-fan" and a heavy duty model with "auto-off-fan" switching are available. Other models available on request.

STRAP-ON WATER CONTROL

A SPDT strap-on type hot water control with 100° to 240°F (38 to 116°C) rated at 10 amps at 120 volt is also available. Control can be used for direct or reverse acting applications as a high or low limit.

STEAM PRESSURE CONTROL

SPST switch opens on a rise in pressure. Control is automatically reset, has a range of 0 to 15 PSIG (0 to 103 KPa) and has an adjustable differential. **Other actions, ranges, circuits and manual reset models are available on request.**

MANUAL STARTERS

Single and three-phase models are available. Standard models are single-speed, toggle-operated, NEMA Type 1 and are surface-mounted. **Note: While these manual starters can be used with explosion-proof motors, they do not meet requirements for use in explosion-proof applications.**

WALL MOUNTED SPEED CONTROLLERS

Horizontal units up to 108 and vertical units up to 104 with standard motors (115 volt) can be operated at reduced speeds by addition of optional speed controller. Controller is 5 amps, pre-set at factory for maximum and minimum speeds, with intermediate speeds infinitely controllable. All 1/3, 1/2 HP and 230 volt motors operate only at rated speed and CFM – See performance data charts.

NOTES:

Constant speed units are rated at capacities shown in regular type; capacities shown in italic faced type apply only to units with multi-speed motors.

* To determine BTU per hour capacities at various steam pressures and entering air temperatures, use conversion factors from Table 17, page 17. Final temperatures at new conditions can be calculated by applying basic formula.

** Stated AMP is full load amps (FLA). AMP draw varies by motor manufacturer ±0.2 AMPS. See Page 25 for motor data.

† Motor HP listed is applicable to standard motor type only. For explosion proof motor HP, see unit installation manual.

† Motor HP listed is applicable to standard motor type only. For explosion proof motor HP, see unit installation manual.

Vertical Unit Heaters Steam Calculations and Correction Factors

		EXAMPLE: – UNIT SIZE: _____ 40 Steam Pressure _____ 10 PSI Entering Air Temp. _____ 40°F
I. CAPACITY		
A. For 2 lbs. steam, 60°F entering air	Read output directly from Tables 14 & 15: 41,300 BTU/HR	
B. For higher steam pressures and/or EAT's above or below 60°F	Multiply output from Tables 14 & 15 by appropriate correction factor from Table 16 (below)	41,300 x 1.27 = 52,451 BTU/HR
II. FINAL AIR TEMPERATURE		
A. For 2 LBS steam, 60°F entering air	Read temperature directly from Tables 14 & 15: 124°F	
B. For capacities calculated in IB (above)	$\frac{\text{Output from IB}}{1.085 \times \text{CFM from Table 14}} + \text{EAT} = \text{Final Air Temperature}$	$\frac{52,451}{1.085 \times 595} + 40 = 121.0^\circ\text{F}$
III. FINAL AIR VOLUME		
A. For 2 LBS steam, 60°F entering air	$\frac{460 + \text{Final Air Temp from Table 14}}{530} \times \frac{\text{Nom. CFM from Table 14}}{\text{Final Air Volume}} = \text{Air Volume}$	$\frac{460 + 124}{530} \times 595 = 655 \text{ CFM}$
B. For final air temperatures calculated in IIB (above)	$\frac{460 + \text{Final Air Temp from IIB}}{530} \times \frac{\text{Nom. CFM from Table 14}}{\text{Final Air Volume}} = \text{Air Volume}$	$\frac{460 + 121.0}{530} \times 595 = 652 \text{ CFM}$
IV. CONDENSATE PER HOUR		
A. For 2 LBS steam, 60°F entering air	Read LBS per hour from Tables 14 & 15: 43 LBS/HR	
B. For capacities calculated in IB (above)	$\frac{\text{Output from IB}}{\text{Latent Heat From Table 17}} = \text{LBS per hour of condensate}$	$\frac{52,451}{953} = 55.0 \text{ LBS/HR}$

Table 16 — STEAM CORRECTION FACTORS BASED ON 2 LBS. STEAM 60°F EAT

ENTERING AIR TEMPERATURE	STEAM PRESSURE — LBS PER SQUARE INCH (SATURATED)									
	0	2	5	10	15	20	30	40	50	75
30°F	1.18	1.22	1.27	1.34	1.40	1.45	1.53	1.61	1.67	1.79
40°F	1.11	1.15	1.20	1.27	1.32	1.37	1.46	1.53	1.59	1.71
50°F	1.03	1.07	1.12	1.19	1.25	1.30	1.39	1.46	1.52	1.64
60°F	0.96	1.00	1.05	1.12	1.18	1.23	1.32	1.39	1.45	1.57
70°F	0.90	0.93	0.98	1.05	1.11	1.16	1.25	1.32	1.38	1.49
80°F	0.83	0.86	0.91	0.98	1.04	1.09	1.18	1.25	1.31	1.42
90°F	0.76	0.80	0.85	0.91	0.97	1.02	1.11	1.18	1.24	1.36
100°F	0.69	0.73	0.78	0.85	0.90	0.96	1.04	1.11	1.17	1.29

Table 17 — PROPERTIES OF SATURATED STEAM

	STEAM PRESSURE IN LBS PER SQUARE INCH GAUGE									
	0	2	5	10	15	20	30	40	50	75
Steam Temperature-°F	212.0	218.5	227.1	239.4	249.8	258.8	274.0	286.7	297.7	319.9
Latent Heat of Steam	970	966	961	953	946	940	929	920	912	891

NOTE 1: Ratings apply only to free inlet and discharge without diffusers.

NOTE 2: All motors are constant speed and operate at top speed as indicated in motor data. Sizes 40 through 104 can be run at reduced speed with addition of optional variable speed switch. This switch is factory-calibrated for low and high speed ratings, with intermediate speeds infinitely controllable. Sizes 164 through 700 operate at constant speed as indicated in motor data.

NOTE 3: For specific motor data refer to motor specifications on page 25.

NOTE 4: To correct for entering air temperatures, use 1°F temperature rise for each foot in mounting height. As an example, 60°F air is required at work area (5 feet above floor) units are to be mounted at (20 feet) above floor. Mounting height (20 feet) minus work height (5 feet) equals differential (15 feet) or, 15°F rise in air temperature at unit air inlet. Correct for actual inlet air temperature of 75°F (60°F + 15°F = 75°F EAT) on Table 16.

Vertical Unit Heaters Hot Water Calculations and Correction Factors

		EXAMPLE: – UNIT SIZE: _____ 40 Entering Water Temp. _____ 160°F Entering Air Temp. _____ 40°F Water Temperature Drop _____ 10°F
I. CAPACITY @ 20°F TD: A. For 200°F EWT, 60°F EAT	Read output directly from Tables 18-21, 22,700 BTU/HR (Ref., Std. Unit Size 40, p. 18)	
B. For EWT and/or EAT above or below Standard	Multiply output from Tables 18-21 by factor from Table 22 (below)	22,700 x .878 = 19,931 BTU/HR
II. CAPACITY AT OTHER TD's A. For TD's from 5 to 60°F	Multiply output obtained in IA or IB (above) by appropriate factor from Table 23 (below)	IA - 22,700 x 1.15 = 26,105 BTU/HR – OR – IB - 19,931 x 1.15 = 22,921 BTU/HR
III. GPM AT OTHER TD's A. For TD's from 5 to 60°F	Multiply GPM of unit for 20°F TD, from Table 18 by appropriate factor from Table 23 (below)	2.34 x 2.30 = 5.38 GPM (Applies only to units with Std 200°F EWT, 60°F EAT) For all others calculate using formula – $GPM = \frac{BTU}{500 \times TD}$
IV. PRESSURE LOSS AT OTHER TD's A. For TD's from 5 to 60°F	Multiply PD of unit for 20°F TD, from Tables 18-21 by appropriate factor from Table 23 (below)	.06 x 5.00 = .30 Ft. H ₂ O

Table 22 — HOT WATER CONVERSION FACTORS BASED ON 200°F ENTERING WATER 60°F ENTERING AIR 20°F TEMPERATURE DROP

ENTERING AIR TEMPERATURE	ENTERING WATER TEMPERATURE — 20°F WATER TEMPERATURE DROP

70°F	0.212	0.353	0.494	0.636	0.777	0.918	1.060	1.201	1.342	1.483	1.630
80°F	0.140	0.279	0.419	0.558	0.698	0.837	0.977	1.117	1.257	1.397	1.545
90°F	0.069	0.207	0.345	0.483	0.621	0.759	0.897	1.035	1.173	1.311	1.462
100°F	0	0.137	0.273	0.409	0.546	0.682	0.818	0.955	1.094	1.230	1.371

To obtain the BTU capacity for conditions other than those in the basic capacity tables, multiply the basic rating (200°F entering water, 60°F entering air) by the proper constant from the above tables.

Table 23 — HOT WATER BTU, GPM AND PRESSURE LOSS FACTORS BASED ON STANDARD CONDITIONS OF 200°F ENTERING WATER 60°F ENTERING AIR & 20°F WATER DROP

USE FACTORS FROM THIS TABLE TO OBTAIN APPROXIMATE RESULTS	TEMPERATURE DROP								
	5°F	10°F	15°F	20°F	25°F	30°F	40°F	50°F	60°F
To obtain BTU for other Water Temperature Drops, multiply basic BTU rating by applicable Factor.	1.25	1.15	1.08	1.00	.94	.90	.83	.76	.72
To obtain GPM for other Water Temperature Drops, multiply basic GPM rating by applicable Factor.*	5.00	2.30	1.44	1.00	.74	.59	.40	.30	.24
To obtain Pressure Loss Feet of Water for other temperature Drops, multiply Basic loss at 20°F drop by Factor.	10.00	5.00	2.00	1.00	.60	.40	.20	.13	.07

NOTES:

* = Low Speed

L = Vertical low output model with all air ports open

Figures in bold face show maximum mounting height with louver cone diffusers set vertically.

To meet ETL and OSHA requirements, units mounted below 8 feet from floor must be equipped with an OSHA fan guard. Please see page 28 for ordering information.

Above table based on 60°F entering air temperature. In providing for the use of diffusers, it must be remembered that adjustment of a LCD to deflect air toward horizontal immediately lowers the mounting height limit.

Mounting Height Correction Factors

Water	°F	150	160	170	180	190	200
Temperature	(°C)	(66)	(71)	(77)	(82)	(88)	(93)

MAXIMUM SPREAD IN FEET

Unit Size:	40	62	77	104	125	144	164	200	237	285	317	367	495	585	700
Spread (Ft.)	15	17	20	24	26	27	28	32	35	37	45	50	54	57	60

NOTE: The “spread” is the diameter of the comfort zone at floor level. Projected by the vertical unit without the louver cone diffuser. Based on two pounds steam pressure and 60°F entering air.

TECHNICAL DATA

Propylene Glycol, when sizing equipment for systems that will utilize a Propylene Glycol solution consider the factors shown on page 8.

Vertical Unit Heaters Motor Characteristics

**Table 29 - TOTALLY ENCLOSED
MOTOR TYPE**

Unit Size	AMP	MCA	MOP	HP	RPM
115/1/60 [SV=1]

367					
495	5.0-4.4/2.2†	6.3-5.5/2.8	11.9-11.3/5.6	1-1/2	1160
585					
700	9.6-8.2/4.1†	12.0-10.3/5.1	22.3-22.1/11.0	3	1165

NOTE 1: All motors are constant speed and operate at top speed as indicated in motor data. Models through 1/8 HP can be run at reduced speed with addition of optional variable speed switch. This switch is factory-calibrated for low and high speed ratings, with intermediate speeds infinitely controllable. Sizes 164 through 700 operate at constant speed as indicated in motor data.

NOTE 2: Stated draw is full load amps (FLA). AMP draw varies by motor manufacturer ± .2 AMPS.

495	4.6-4.7/2.3**	5.8-5.9/2.9	10.4-10.6/5.2	1-1/2	1175
585	4.6-4.7/2.3**	5.8-5.9/2.9	10.4-10.6/5.2	1-1/2	1175
700	10.0/5.0 †‡	12.5/6.3	22.5/11.3	3	1150

* Optional variable speed switch is available.

** These motors have automatic thermal overload protection or impedance protection.

† These motors are without thermal overload protection. Motors without thermal overload protection must be installed with the optional manual starter or other field provided overload protection.

‡ These motors are 230/460 volts only.

NOTE 3: Models 317 through 700 are not available for either Totally Enclosed or Explosion Proof with Overload 115/1/60 motor types.

CAUTION: Select appropriate AMP, MCA, and MOP for the multiple voltage motors. For example, the AMP, MCA, and MOP for Model 40 with a 230 volt Totally Enclosed motor is 1.1, 1.4, and 2.5 respectively.

Horizontal and Vertical Unit Heater Piping and Installation

The illustrations below depict different typical piping configurations. Proper selection should be based on the operational characteristics of the source supply. For selection and sizing of piping, traps, filters and other piping specialties, ASHRAE guides and specialty manufacturer's literature should be consulted. We assume that the type and total design of systems has been selected or approved by a qualified engineer. The installation and service manual should be consulted for further information on installation, operation, drainage and system cleaning.

Piping and installation is typical for both horizontal and vertical unit heaters – except side connections Figure 13.

Wiring Diagrams — Figure 14

1. For internal wiring and overload protection on all starters, consult the control manufacturer for details.
2. When using thermostatic control with a manual starter, be sure that the electrical rating of the thermostat is sufficient to carry the motor current.
3. Refer to pages 13 and 25 for motor characteristics of individual unit heaters.

Warranty

STEAM/HOT WATER UNIT HEATER WARRANTY

The products in this catalog are warranted by the manufacturer to be free from defects in material and workmanship for a period of one (1) year from the date of shipment from the manufacturer's plant. The manufacturer's liability under this warranty is limited to replacing or repairing at our option, F.O.B. our plant any defective component or assembly returned to our factory prepaid and with proper return authorization documents. All repairs or replacements are made subject to factory inspection. No liability is accepted for consequential damages, freight or labor charges.

This warranty does not cover damages or failure due to improper installation or piping, corrosive atmospheric conditions, misuse or negligence by others.

TERMS OF SALE

- No obligation is assumed by this corporation to sell to anyone holding this book any of the items listed herein.
- An order is not a valid order until acknowledged by the manufacturer.
- The manufacturer reserves the right to make changes in design, material or accessory vendors without notice and without obligation to incorporate such changes in products of prior manufacture.
- Additional sales and freight terms are contained in the price list.
